TRANSPORT IN PLANTS II

PART A CELLS

Springer As plant physiology increased steadily in the latter half of the 19th century, problems of absorption and transport of water and of mineral nutrients and problems of the passage of metabolites from one cell to another were investigated, especially in Germany. JUSTUS VON LIEBIG, who was born in Darmstadt in 1803, founded agricultural chemistry

and developed the techniques of mineral nutrition in agriculture during the 70 years of his life. The discovery of plasmolysis by NAGEL (1851), the investigation of permeability problems of artificial membranes by TRAUBE (1867) and the classical work on osmosis by PFEFFER (1877) laid the foundations for our understanding of soluble substances and osmosis in cell growth and cell mechanisms. Since living membranes were responsible for controlling both water movement and the substances in solution, "permeability" became a major topic for investigation and speculation. The problems then discussed under that heading included passive permeation by diffusion, Donnan equilibrium adjustments, active transport processes and antagonism between ions. In that era, when organelle isolation by differential centrifugation was unknown and the electron microscope had not been invented, the number of cell membranes, their thickness and their composition, were matters for conjecture. The nature of cell surface membranes was deduced with remarkable accuracy from the reactions of cells to substances in solution. In 1895, OVERTON, in U. S. A. , published the hypothesis that membranes were probably lipid in nature because of the greater penetration by substances with higher fat solubility.

ETHICS IN SCIENCE

PEDAGOGIC ISSUES AND CONCERNS

Springer Nature The book approaches the subject of ethics in science from a pedagogical and pragmatic viewpoint and addresses the need to effectively deal with these issues in science classrooms at the K-12 and undergraduate levels, drawing on real-world cases to do so. The book also explores ethical issues in connection with recent biotechnological advances and urges the reader to move beyond a disciplinary understanding and adopt an interdisciplinary view of the entire issue. Intended to initiate a process of reflecting on and investigating these ethical issues related to biotechnologies, and to enable the reader to take a personal stance on these issues rather than being led by outside agencies, the book offers a source of in-depth study material for researchers working in this area, as well as a training manual for teachers at both in-service & pre-service level, teacher educators, curriculum designers and professionals working in the field. Combining theory and practice, and including teachers' reflections on their own pedagogic practice, it offers

a valuable resource to help teaching professionals conduct experiments and achieve pedagogic innovations in their own work. “‘Ethics in Science- Pedagogic Issues & Concerns’ is an excellent textbook for high school and college students that provides an overview of the ethical issues in science and technology and includes useful cases studies and questions for discussion. I recommend it highly.” —David B. Resnik, JD, PhD, Bioethicist and IRB Chair, National Institute for Environmental Health Sciences, National Institutes of Health, USA “Given the recent proliferation of biological and biomedical knowledge, the need for education in the relationship between science and ethics has become ever increasingly essential. The book by Dr. Saxena provides a valuable introduction on how to inaugurate such an education. This book is an excellent template for those attempting to teach science and ethics.” —Bernard.E.Rollin, University Distinguished Professor, Colorado State University, Colorado, USA “This book by Dr Astha Saxena, a well-qualified educationist, fulfils a need for such a book for students of Science and Technology stream. The coverage is comprehensive and the writing is lucid. I endorse this book as it will bring a criticality of thinking among Indian students.” —Kambadur Muralidhar PhD, FASc, FNASc, FNA, University of Hyderabad, Hyderabad “Science without ethics can lead to false scientific claims as well as unbridled technological growth. The present book conceptualizes this integration of ethics and science beautifully with academic rigour.” —Alka Behari, Professor, Department of Education, University of Delhi, New Delhi, India
