Teaching and Learning Argumentative Writing in High School English Language Arts Classrooms

Routledge Focused on the teaching and learning argumentative writing in grades 9-12, this important contribution to literacy education research and classroom practice offers a new perspective, a set of principled practices, and case studies of excellent teaching. The case studies illustrate teaching and learning argumentative writing as the construction of knowledge and new understandings about experiences, ideas, and texts. Six themes key to teaching argumentative writing as a thoughtful, multi-leveled practice for deep learning and expression are presented: teaching and learning argumentative writing as social practice, teachers' epistemological beliefs about argumentative writing, variations in instructional chains, instructional conversations in support of argumentative writing as deep learning and appreciation of multiple perspectives, contextualized analysis of argumentative writing, and the teaching and learning of argumentative writing and the construction of rationalities.

Statistical Methods for Psychology

Cengage Learning STATISTICAL METHODS FOR PSYCHOLOGY surveys the statistical techniques commonly used in the behavioral and social sciences, particularly psychology and education. To help students gain a better understanding of the specific statistical hypothesis tests that are covered throughout the text, author David Howell emphasizes conceptual understanding. This Eighth Edition continues to focus students on two key themes that are the cornerstones of this book's success: the importance of looking at the data before beginning a hypothesis test, and the importance of knowing the relationship between the statistical test in use and the theoretical questions being asked by the experiment. New and expanded topics--reflecting the evolving realm of statistical methods--include effect size, meta-analysis, and treatment of missing data. Quantitative Research Methods for Professionals

Allyn & Bacon This concise text discusses a wide range of quantitative research methods, including advanced techniques such as logic regression, multilevel modeling, and structural equation modeling. Language and Esl Methodology

A Unique Perspective

Partridge Publishing Singapore It is unfortunate but true that many misconceptions exist regarding teaching English to non-English speakers. Just as one who can read is not by that criterion alone capable of teaching reading, knowing a particular language does not ensure that one can effectively teach it. It is an error to assume that "common sense" can guide one in this regard. True "common sense" is simply not as common as many may believe. What may appear a sensible thing to do in teaching ESL, may in fact (as one who reads the book will see) prove counter-productive and in turn detrimental to the learning process. This book focuses on subject matter which includes the question of what language actually is (it's components, skills, and traits), the mystery of the origin of language, the history of the English language, an in-dept view of the Audio-Lingual (ALM) teaching method (its philosophy, approaches and one time long standing popularity) as well as its decline as a foundation course, ESL testing (with an emphasis on measuring one's oral ability and progress) along with a complete aural-oral testing instrument, culture as a significant factor in language learning, and a question and answer section for clarifying items of interest of those involved in the field of ESL. The book is designed to be of value to ESL teachers and administrators, students preparing to teach ESL, volunteers in need of learning more about the field and individuals who may simply be interested in the history of the language (especially English) and/or ESL methodology. The book's information is expected to increase the knowledge of readers as well as to help some strengthen and others develop a solid foundation upon which to rely in whatever approach they choose to teach ESL.
