NAUGHTY

In 1985, forty hooligan followers of Stoke City FC experienced a riotous trip to Portsmouth - and the Naughty Forty was born. It became one of the most notorious soccer gangs in Britain. Mark Chester was a founder member of the N40. Already a hardened fighter, he had been expelled from school after an unsettled childhood and joined the Staffordshire Regiment, only to be discharged for misconduct. Stoke City's emerging 'casual' mob became his family. 'Right or wrong, I was ready to be a committed football hooligan,' he says. He recounts tales of raucous coach trips from the Glebe pub and the pivotal clashes with the likes of Everton, Manchester United and West Ham that defined the new firm. Formidable characters came to the forefront, men like the giant Mark Bentley, Philler the Beast and the legendary Miffer, while hair-raising clashes with the likes of Millwall, Spurs, Aston Villa and Manchester City saw the gang's reputation spread. The N40 code was simple: whatever the odds, they would always make a stand. Many times they

fought when heavily outnumbered yet often came out on top. They developed a closeness and cohesion rare among the football gangs. Loyalty was their watchword. Soon they were joined by the Under-Fives, a younger element determined to win acceptance from the terrace legends they admired and who carved out their own niche as well as fighting side by side with the old-school heads. Police operations, bans from the ground and the introduction of ID schemes have prevented many from attending games, but the author, long 'retired' from the scene, argues that in the new millennium the gangs are back - and as ferocious as ever. NAUGHTY is essential reading for anyone wishing to understand the illicit but seductive lure of terrace combat, the emotional ties of a gang and the addictive buzz of Saturday afternoons.

BIOMETRIC SYSTEM AND DATA ANALYSIS

DESIGN, EVALUATION, AND DATA MINING

Springer Science & Business Media This book brings together aspects of statistics and machine learning to provide a comprehensive guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

LOST AND FOUND

On a bright autumn day, Flynn Marlowe lost his best friend, a beagle named Barley, while out on a hike in Seattle's Discovery Park. On a cold winter day, Mac Bowersox found his best friend, a lost, scared, and emaciated beagle, on the streets of Seattle. Two men. One dog. When Flynn and Mac meet by chance in a park the next summer, there's a problem -- who does Barley really belong to? Flynn wants him back, but he can see that Mac rescued him and loves him just as much as he does. Mac wants to keep the dog, and he can imagine how heartbreaking losing him would be -- but that's just what Flynn experienced. A "shared custody" compromise might be just the way to work things out. But will the arrangement be successful? Mac and Flynn are willing to try it ... and along the way, they just might fall in love. The paperback edition includes the story, "I Heart Boston Terriers." Love at first sight can work for dogs as well as humans. When Aaron finds Mavis, an emaciated and timid Boston terrier, at a pet adoption fair, his heart goes out to her -- irrevocably. When Christian, who is manning the adoption fair for the Humane Society that fateful autumn Saturday, finds Aaron, his heart goes out to him -- irrevocably.

ANALYSIS, CONTROLLABILITY AND OPTIMIZATION OF TIME-DISCRETE SYSTEMS AND DYNAMICAL GAMES

Springer Science & Business Media J. P. La Salle has developed in [20] a stability theory for systems of difference equations (see also [8]) which we introduce in the first chapter within the framework of metric spaces. The stability theory for such systems can also be found in [13] in a slightly modified form. We start with autonomous systems in the first section of chapter 1. After theoretical preparations we examine the localization of limit sets with the aid of Lyapunov Functions. Applying these Lyapunov Functions we can develop a stability theory for autonomous systems. If we linearize a non-linear system at a fixed point we are able to develop a stability theory for fixed points which makes use of the Frechet derivative at the fixed point. The next subsection deals with general linear systems for which we introduce a new concept of stability and asymptotic stability that we adopt from [18]. Applications to various fields illustrate these results. We start with the classical predator-prey-model as being developed and investigated by Volterra which is based on a 2 x 2-system of first order differential equations for the densities of the prey and predator population, respectively. This model has also been investigated in [13] with respect to stability of its equilibrium via a Lyapunov function. Here we consider the discrete version of the model.

MARIE DARRIEUSSECQ'S TEXTUAL WORLDS

SELF, SOCIETY, LANGUAGE

Peter Lang Pub Incorporated This is the first book-length study devoted to the work of Marie Darrieussecq, one of France's leading contemporary writers, whose work has proved fascinating to both critics and readers for its diversity, the author's seeming ability to evade established literary categories and the changes in focus of her trajectory. This volume focuses on this ambivalence, highlighting the capacity of Darrieussecq's texts both to confront contemporary social issues, such as national identity and the role of women, and examine the complex relationship between language and reality. Focusing on the mid-section of her oeuvre (<l>Bref sejour chez les vivants, <l>Le Bebe and <l>Le Pays), the author of this study brings together Darrieussecq's social realism, her emphasis on the productive and creative roles of language and narrative, and her interest in the role of social discourse in the formation of identity. The analysis in this book highlights the significant questions that Darrieussecq's texts raise about the ways in which we perceive and narrate the world and makes clear the original and essential nature of Darrieussecq's continuing literary project."

ARTISTS' LABORATORY

STEPHEN FARTHING RA : THE BACK STORY

The Artists Laboratory series presents the more experimental and less familiar work of contemporary artists, opening up the creative process to explore the conceptual and practical concerns with which they engage. In recent years Stephen Farthing has investigated the back story of paintings, his own and those by other artists, using drawing and painting to understand their character, content and form. Examining the art-historical classifications that define the pictures, the narratives that have informed their content or the patterns they share with other works, he sifts and organises the information in drawings, and proposes conclusions in paintings. David Scott Kastan responds to this body of work, published here for the first time, with an eloquent analysis of several key pieces, while Farthing and his fellow artist Stephen Chambers discuss subjects ranging from the attitude required to write about a painting and the role that text can play in making one, to the differences in working on either side of the Atlantic.
