EDUCATING THE STUDENT BODY

TAKING PHYSICAL ACTIVITY AND PHYSICAL EDUCATION TO SCHOOL

National Academies Press Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. *Educating the Student Body* makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

STRATEGIC HUMAN CAPITAL DEVELOPMENT IN ASIA

BUILDING ECOSYSTEMS FOR BUSINESS GROWTH

Taylor & Francis Asia continues to ascend as an economic powerhouse and a strategic priority for business leaders around the world, yet there is often limited understanding of the human capital systems that fuel the economic engines of the region. This book brings together the perspectives from economics, sociology, and management to highlight the business implications of human capital development in Asia. This book provides new insights on human capital systems in Asia by considering the country context through a 'Human Capital Ecosystem' framework. Applying this framework, constituent outline, and comparable points across each of the countries in Asia, Smith translates national policies into insights on the drivers, challenges, and opportunities in individual countries. Each chapter also draws out clear business and HR implications based on the above framework and analysis. While Asia continues to be a critical priority for businesses, there is limited understanding on how to manage and navigate the human capital systems in each of the region's diverse countries. This book will serve as a helpful reference for managers or supplemental study guide for graduate students working to understand how to execute business strategy in major economies of Asia.
