CLINICAL TRIALS IN OVARIAN CANCER

Rutgers University Press When a patient is diagnosed with a gynecological malignancy, she and her doctors must make urgent, high-risk decisions about her course of treatment. In selecting an appropriate plan of care, physicians must weigh the patient's individual needs, the tumor's specific characteristics, and the treatment's potential side effects. Because there is no one-size-fits-all treatment solution, a plethora of clinical trials have been performed on ovarian cancer patients, but clinicians may struggle to keep up with this ever-growing body of research. Collecting and synthesizing research findings from a wide array of medical journal articles and book chapters, *Clinical Trials in Ovarian Cancer* provides physicians with an invaluable resource. Gynecologic oncologist Christine S. Walsh systematically outlines each of the seminal Phase III trials that have shaped the treatment of ovarian cancers, detailing the rationale for the trial, the patient population studied, treatment delivery methods, efficacy, toxicity, and trial conclusions. She provides a clear overview of established treatments, as well as still-controversial experimental approaches. The first book to organize this cutting-edge research into an easy-to-use reference, *Clinical Trials in Ovarian Cancer* should help medical personnel at all levels provide their patients with the highest standard of care.

UNITED STATES ARMY GHQ MANEUVERS OF 1941 (PAPERBOUND EDITION)

Government Printing Office The U.S. Army GHQ Maneuvers of 1941 is a masterful study of the largest military training exercises ever conducted by a military organization attempting to mobilize and modernize simultaneously during a rapidly changing international security environment. As suggested by Christopher R. Gabel, the maneuvers had an incalculable influence on the development of the American force structure in World War II, giving Army formations experience in teamwork and combined arms. Viewed by Army Chief of Staff George C. Marshall as the "combat college for troop leading" for the rising crop of field-grade officers, they also served to test emerging assumptions about doctrine, organization, and equipment. Gabel's work assumes its rightful place as an important and useful addition to the body of historical literature on military training. The evolution of training in the U.S. Army, particularly the linkage between maneuvers and changes in doctrine and organization, is worthy of reflection by military students and those with an interest in maneuvers as field laboratories for simulating large-scale engagements.

ADVANCES IN PSORIASIS

A MULTISYSTEMIC GUIDE

Springer It has become increasingly clear that psoriatic disease, both of the skin and joints, can be a significant diagnostic and therapeutic challenge for the physician and a debilitating illness for the patient. Genetic and immunologic advances have increased our understanding of the pathophysiology of psoriasis and psoriatic arthritis and there is a need for practically oriented evidence based references to describe the management options open to clinicians. The speed at which developments are occurring in the field also necessitates a novel approach to keeping up with these changes in practice and the need is for a reference that that be updated regularly as the subject requires. Psoriasis is an incredibly fast-moving discipline within dermatology. Guidelines, treatment options and management all change at incredible speed. There is a requirement to provide a comprehensive reference resource to provide practical, user friendly information for the dermatology profession to aid in the decision-making process. Psoriasis is a graphical subdiscipline of medicine and therefore this will have copious illustrations. As a fast moving discipline the emphasis must be on annual updates to ensure that readers are kept up to date on the important areas of development.

INTERNATIONAL SUBMARINE CABLES AND BIODIVERSITY OF AREAS BEYOND NATIONAL JURISDICTION

THE CLOUD BENEATH THE SEA

Brill Research Perspectives in If one uses Facebook, Facetime, Skype, Netflix, or any application of the internet internationally, a submarine cable is involved. Fibre optic cables bind the world together and computer server farms, maintained by major telecom and content companies, allow vast amounts of data to be stored and retrieved from the cloud. Not often appreciated is the fact that these server locations worldwide are connected by submarine fibre optic cables. In this sense, the cloud is beneath the sea. While submarine communication cables have been in steady use since 1850, their preeminent place in the modern world has never been as dominant and personal as now. Recently, calls have mounted in the context of marine biodiversity beyond national jurisdiction (BBNJ) for centralized control of submarine cables and for express or de factodiminishment of the freedoms related to them via the United Nations Convention on Law of the Sea, that have served the world's peoples for so long. In International Submarine Cables and Biodiversity of Areas Beyond National Jurisdiction, Douglas R. Burnett and Lionel Carter examine the time proven importance of the existing international treaties, the largely peer-reviewed science on the environmental interaction of submarine cables with high seas environments, and the current submarine cable issues in the context of the BBNJ debates.

NEUROCRITICAL CARE BOARD REVIEW

QUESTIONS AND ANSWERS

Demos Medical Publishing Neurocritical Care Board Review: Questions and Answers provides clinicians with a thorough review of the complex subspecialty of Neurocritical Care, using a question-and-answer (Q&A) format. The Q&A format is easily readable, high yield, and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge. The book covers the key topics pertinent to (and found on) neurocritical care boards, and is organized according to the exam core curriculum outline.. A total of 649 questions address both neuroscience critical care (general neurology, neurotrauma, neurovascular and neurosurgical problems) and general critical care topics (systems trauma, cardiovascular, infectious disease, pulmonary and renal issues, and hemodynamic monitoring). Detailed explanations follow in the answer section of each chapter, along with references for further study. Where relevant, neuroimaging, EEG and monitoring waveforms, and other images are included in case questions to allow candidates to familiarize themselves with these tools that form a significant part of the exam. Features of Neurocritical Care Board Review include: Comprehensive, high-yield review that covers all areas tested on the neurocritical care certifying exam Applicability to a wide range of physicians in multiple specialties reviewing for boards or looking to test skills and clinical acumen in this challenging area Question and answer format with detailed explanations and references to facilitate recall of must-know information and help identify knowledge gaps for further attention Material aggregated from multiple specialties into a singular resource for exam study
