Coping with Stress and Burnout as a Veterinarian

Australian Academic Press **Being a veterinarian can be a rewarding, challenging and demanding career requiring a passion for animals, great interpersonal skills and a strong work ethic. It also has a dark and very dangerous side. The suicide rate for veterinarians is almost four times higher than the general population across the UK, Australia, US, New Zealand and Canada. The effects of working long hours, performing euthanasia on animals, emotional pressure, financial issues, unrealistic expectations, and dealing with distressed clients places considerable stress on both the vet themselves and their families at home. Failure to cope with such stress upsets mental wellbeing and can lead to serious emotional, physical, and behavioural issues. For some it leads to death. If we are to reduce this tsuffering we need to find out what hinders a vet's wellbeing and use targeted solutions that work. In this unique book, psychologist Dr Nadine Hamilton presents an examination of the problem, the ways vet mental health is influenced by their daily work and the science we can use to tackle it head on. Drawing from the fields of positive psychology, acceptance and commitment therapy, career construction theory, and resiliency studies, she outlines a promising new weapon in the profession's fight against suicide. Included in this book is a concise self-help version of her ground-breaking Coping and Wellbeing Program for Veterinary Professionals – an evidence-based psycho-educational intervention to educate vets on how to develop protective attitudes, enhance wellbeing, and increase their coping skills. This is a book for every veterinarian, veterinary student and veterinary nurse.**

Drugs

Synonyms and Properties

John Wiley & Sons **Drugs: Synonyms and Properties** provides comprehensive coverage of the 10,000 drugs currently in common use worldwide. Its overall organization and inclusion of detailed chemical information fills an important gap in drug information. This reference, edited by a world-renowned authority in drug design and chemical information and now in its

second edition, has become one of the bibles of pharmaceutical research and application. This book organizes the 10,000 drugs currently in use by therapeutic category. Therefore all tranquilizers, all antidepressants, or all anorexic agents, for example, are grouped together. In all, 204 categories are represented. This arrangement means that all drugs in a given category can be reviewed very easily and their relative properties compared quickly. A key component of this reference is the extensive coverage of synonyms. The book includes an index of over 30,000 drug synonyms and trade names with a cross-reference to their main entry. This extraordinarily comprehensive view of trade names and generic synonyms makes *Drugs: Synonyms and Properties* one of the world's most exhaustive references in its field. For each main entry, the following information is provided: chemical name and a list of trade names and synonyms; the Chemical Abstracts Service (CAS) Registry Number; the European Inventory of Existing Commercial Chemical Substances (EINECS) Number; the Merck Index (Twelfth Edition) Number; the physical properties of each compound; and the known biological activity and indicated applications. Indexes, including a master index of names and synonyms, and of manufacturers and suppliers, are appended. This reference will be invaluable to research chemists, biologists, and physicians and to anyone interested in drugs who, starting with a single synonym for a drug, will be able to quickly find a thumbnail sketch of the essential information concerning that agent.
