## **DIAGNOSIS AND TREATMENT OF HUMAN MYCOSES**

---

Springer Science & Business Media Diagnosis and Treatment of Human Mycoses brings together globally-recognized mycoses experts to guide readers in the use of current knowledge in the field of medical mycology to manage those who suffer from fungal infections (mycoses). Often, diagnostic strategies and tests, including basic and directed culturing techniques, histopathology with standard and special stains, serological methods, and radiological studies all need to be considered and commonly combined to make the diagnosis of fungal infection. This volume first introduces and reviews these tools separately and then as they pertain to specific infections or groups of diseases. The volume consists of four parts. Parts I-III provide an overview of diagnostic and therapeutic tools, and part IV presents the human mycoses. Diagnosis and Treatment of Human Mycoses is meant to be a concise text that will provide the busy infectious disease, hematology-oncology, pulmonology, or critical care specialist a practical tool to diagnose and manage fungal infections. In addition, the depth of the material in the text will provide these and other medical specialists and trainees an excellent reference and learning resource.

## **TUTORIAL TOPICS IN INFECTION FOR THE COMBINED INFECTION TRAINING PROGRAMME**

---

Oxford University Press, USA Microbiology and virology laboratories provide a diagnostic service that supports the management of patients under the care of front-line clinicians. Despite the significant overlap, laboratory expertise and clinical patient management are traditionally viewed as independent entities. Trainees in the infection disciplines of microbiology, virology, infectious diseases, and tropical medicine have until recently received separate, and as a result, limited training. To address this problem, the UK replaced the FRCPath Part 1 examination for infectious disease trainees with a combined infection training (CIT) curriculum in 2015. Based on the idea of integration and collaboration within the field, CIT links laboratory expertise to clinical patient management. Tutorial Topics in Infection for the Combined Infection Training Programme is the first book covering the complete CIT curriculum. Following the format of the CIT certificate examination, each chapter ends with three single best answer multiple choice questions accompanied by in-

depth discussions. This extensive content helps students appreciate the breadth of knowledge required, emphasises how the different aspects of the field are related, and is an essential tool for those preparing for the CIT certificate examination. Written by a multi-disciplinary team of medical microbiologists, virologists, infectious disease physicians, clinical scientists, biomedical scientists, public health specialists, HIV clinicians, and infection control nurses, this well-illustrated and easy to use book offers a unique insight into infectious diseases. It is the perfect primer for further study, a starting point for medical students and professionals wishing to learn more about the different topics within the infection specialty, and ideal for biomedical scientists looking to broaden their clinical understanding of the field beyond the diagnostic test.
