The Cambridge History of Science Fiction

Cambridge University Press The first science fiction course in the American academy was held in the early 1950s. In the sixty years since, science fiction has become a recognized and established literary genre with a significant and growing body of scholarship. The Cambridge History of Science Fiction is a landmark volume as the first authoritative history of the genre. Over forty contributors with diverse and complementary specialties present a history of science fiction across national and genre boundaries, and trace its intellectual and creative roots in the philosophical and fantastic narratives of the ancient past. Science fiction as a literary genre is the central focus of the volume, but fundamental to its story is its non-literary cultural manifestations and influence. Coverage thus includes transmedia manifestations as an integral part of the genre's history, including not only short stories and novels, but also film, art, architecture,

music, comics, and interactive media.

From the Ground Up

A History of Mining in Utah

Utah State University Press Despite mining's multidimensional role in the history of Utah since Euro-american settlement, there has never been a book that surveyed and contextualized its impact. From the Ground Up fill that gap with a collection of essays by leading Utah historians and geologists. Essays here address the geology of the state, the economic history of mining in Utah, and the lore of mines and miners. Additionally, the book reviews a handful of particularly significant mineral industries---saline, coal, uranium, and beryllium---and surveys important hard-rock mining regions of the state.

Honda Gold Wing & Valkyrie

Motorbooks In 1974, Honda took the wraps off a 1000cc flat four with shaft drive and water cooling, and the Honda Gold Wing was born. Renowned photographer Malcolm Birkitt has included coverage of Honda's dynamic, new Valkyrie in this update of his best-selling Honda Gold Wing title, as well as examining all the changes in the Gold Wing since 1995. Included are intriguing early design sketches and portraits by Honda's designers and engineers.

How to Build a Bobber on a Budget

Motorbooks International In the old days all a person needed to build a killer custom motorcycle was a bike, a set of tools, a little know-how, and a creative vision. But with the rise of the high-dollar, haute moteur Gucci choppers, the true custom bike has gotten out of most riders' reach, right? Dead wrong. In this book Jose de Miguel, a custom builder from way back, sets out to prove that those good old days never ended. In the clearest and simplest terms, he shows readers how they can turn odds and ends found around the shop into one-off motorcycle parts--and make a cheap, run-of-the-mill custom build into a drop-dead show stopper. Following de Miguel's lead, along with his straightforward illustrations, any resourceful owner with rudimentary mechanical skills, a basic tool kit, and--most importantly--a modicum of imagination can build the bobber of his dreams for less than the price of a new bike.

The Indian in American History

University of Massachusetts School of The treatment of American Indians is discussed historically with reference to the 4 principal methods used to create or perpetuate false impressions: obliteration, defamation, disembodiment, and disparagement. Indian contributions to American civilization are cited in contrast with historical references to Indians in textbooks. The author suggests specific reading materials for various age levels which reflect accurately the cultural contributions of the Indian. A bibliography on the American Indian influence on American civilization is appended. (Jh).

Damming Grand Canyon

The 1923 USGS Colorado River Expedition

In 1923, America paid close attention, via special radio broadcasts, newspaper headlines, and cover stories in popular magazines, as a government party descended the Colorado to survey Grand Canyon. Fifty years after John Wesley Powell's journey, the canyon still had an aura of mystery and extreme danger. At one point, the party was thought lost in a flood. Something important besides adventure was going on. Led by Claude Birdseye and including colorful characters such as early river-runner Emery Kolb, popular writer Lewis Freeman, and hydraulic engineer Eugene La Rue, the expedition not only made the first accurate survey of the river gorge but sought to decide the canyon's fate. The primary goal was to determine the best places to dam the Grand. With Boulder Dam not yet built, the USGS, especially La Rue, contested with the Bureau of Reclamation over how best to develop the Colorado River. The survey party played a major role in what was known and thought about Grand Canyon. The authors weave a narrative from the party's firsthand accounts and frame it with a thorough history of water politics and development and the Colorado River. The recommended dams were not built, but the survey both provided base data that stood the test of time and helped define Grand Canyon in the popular imagination.

Semi-Trucks of the 1950s

Enthusiast Books After WWII Americans were anxious to re-stoke the economy after a long “make-do with what you have” dry spell. By the 1950s new highways were being built, new trucking companies were being formed and old ones revived. Americans were buying newly-styled cars and the latest technologies once again. Semi-trucks helped pave the way for this huge growth spurt in America with dependable trucks built by Mack, GMC, Chevrolet, Ford, Dodge, International, White Freightliner, Peterbilt, Kenworth, Diamond T, Reo, Autocar, Brockway, Sterling and others, many using the increasingly popular diesel engines made by Buda, Hercules, Waukesha, and Cummins, which helped their heavy loads haul quicker. Ron Adams portrays this booming era with over 300 superb photos of trucks hauling cement, fuel, and a variety of goods to enthusiastic Americans.

ABC of the Motorcycle

This is a high quality facsimile of "ABC of the Motorcycle" by W. J. Jackman, originally published in 1916. The man who expects to find in this book a technical or theoretical discussion of the motorcycle and its mechanism will be disappointed. It has been written solely for the guidance of those who know they don't know much, if anything, about the subject, and wish to start right in advising themselves about it. With this purpose in view the language used is intentionally devoid of technicalities and readily understandable. The book is what may well be termed a "show how" one. Step by step, in rational order, the various parts of the machine are taken up and their functions explained until these parts are assembled in the completed machine, and their unity of action thus demonstrated. First, we have the generation of the fuel which supplies the motive power; next, the manner in which the force created by this fuel is utilized; then, the part taken by the motor or engine in communicating this energy to the transmission system; and finally, the transmission itself. If the reader will give these various chapters careful consideration, comparing them as he goes along with the explanatory illustrations which accompany them, he will readily obtain a clear, comprehensive understanding, not only of the mechanism itself, but of the principle upon which it is based. This information, once thoroughly absorbed, will enable the rider of a motorcycle to get more satisfactory service from his machine, increase his pleasure in using it, avoid a lot of trouble in its operation, and enable him to overcome many annoying things which, under other circumstances, would require the attention of an expensive expert.
