ERGONOMICS AND HUMAN FACTORS

RECENT RESEARCH

Springer Science & Business Media **And Applications To The Human-Computer Interface Michael E. Fotta AT&T Communications 16th Flr. Atrium II, Cincinnati, OH 45202** Artificial intelligence (AI) programs represent knowledge in a fashion similar to human knowledge and the activities of an AI system are closer to human behavior than that of traditional systems. Thus, AI enables the computer to act more like a human instead of making the human think and act more like a computer. This capability combined with applying human factors concepts to the interface can greatly improve the human-computer interface. This paper provides an introduction to artificial intelligence and then proposes a number of methods for using AI to improve the human-machine interaction. **AN INTRODUCTION TO ARTIFICIAL INTELLIGENCE** Definition There are many definitions of artificial intelligence (AI) running from the very general to the very detailed. Perhaps the most well accepted general definition is that by Elaine Rich: "Artificial intelligence is the study of how to make computers do things at which, at the moment, people are better", (Rich,

1983). A good example of a detailed definition is provided by the Brattle Research Corporation; "In simplified terms, artificial intelligence works with pattern matching methods which attempt to describe objects, events or processes in terms of their qualitative features and logical and computational relationships," (Mishkoff, 1985).

ENTERPRISE INFORMATION SYSTEMS V

Springer Science & Business Media This book comprises a set of papers selected from those presented at the fifth « International Conference on Enterprise Information Systems », (ICEIS'2003) held in Angers, France, from 23 to 26 April 2003. The conference was organised by École Supérieure d'Électronique de l'Ouest (ESEO) of Angers, France and the Escola Superior de Tecnologia of Setúbal, Portugal. Since its first edition in 1999, ICEIS focuses on real world applications and aims at bringing together researchers, engineers and practitioners interested in the advances and business applications of information systems. As in previous years, ICEIS'2003 held four simultaneous tracks covering different aspects of enterprise computing: Databases and Information Systems Integration, Artificial Intelligence and Decision Support Systems, Information Systems Analysis and Specification and Software Agents and Internet Computing. Although ICEIS'2003 received 546 paper submissions from over 50 countries, only 80 were accepted as full papers and presented in 30-minutes oral presentations. With an acceptance rate of 15%, these numbers demonstrate the intention of preserving a high quality forum for future editions of this conference. From the articles accepted as long papers for the conference, only 32 were selected for inclusion in this book. Additional keynote lectures, tutorials and industrial sessions were also held during ICEIS'2003, and, for the first time this year, the 1st Doctoral Consortium on Enterprise Information Systems gave PhD students an opportunity to present their work to an international audience of experts in the field of information systems.

THE INNOVATION IMPERATIVE

CONTRIBUTING TO PRODUCTIVITY, GROWTH AND WELL-BEING

OCDE Well-timed and targeted innovation boosts productivity, increases economic growth and helps solve societal problems. But how can governments encourage more people to innovate more of the time? And how can government itself be more innovative? The OECD Innovation Strategy provides a set of principles to spur innovation in people, firms and government. It takes an in-depth look at the scope of innovation and how it is changing, as well as where and how it is occurring, based on updated research and data.

THE FUTURE INTERNET

FUTURE INTERNET ASSEMBLY 2011: ACHIEVEMENTS AND TECHNOLOGICAL PROMISES

Springer Irrespective of whether we use economic or societal metrics, the Internet is one of the most important technical infrastructures in existence today. It will be a catalyst for much of our innovation and prosperity in the future. A competitive Europe will require Internet connectivity and services beyond the capabilities offered by current technologies. Future Internet research is therefore a must. This book is published in full compliance with the Open Access publishing initiative; it is based on the research carried out within the Future Internet Assembly (FIA). It contains a sample of representative results from the recent FIA meetings spanning a broad range of topics, all being of crucial importance for the future Internet. The book includes 32 contributions and has been structured into the following sections, each of which is preceded by a short introduction: Foundations: architectural issues; socio-economic issues; security and trust; and experiments and experimental design. Future Internet Areas: networks, services, and content; and applications.

VEHICLE DYNAMICS

MODELING AND SIMULATION

Springer The authors examine in detail the fundamentals and mathematical descriptions of the dynamics of automobiles. In this context, different levels of complexity are presented, starting with basic single-track models up to complex three-dimensional multi-body models. A particular focus is on the process of establishing mathematical models based on real cars and the validation of simulation results. The methods presented are explained in detail by means of selected application scenarios. In addition to some corrections, further application examples for standard driving maneuvers have been added for the present second edition. To take account of the increased use of driving simulators, both in research, and in industrial applications, a new section on the conception, implementation and application of driving simulators has been added.

TRENDS AND ISSUES IN GLOBAL TOURISM 2010

Springer Science & Business Media This book offers insights into important trends and future scenarios in the global tourism and travel industry and analyses current challenges in the aviation and hospitality industry, destination management and general travel behaviour. Well-known notabilities share their points of view. For example, Norbert Walter, chief economist of the Deutsche Bank, writes about the financial crisis and its impact on the tourism industry. Top executives of international operating airlines like C. Karlitekin (Turkish Airlines), J. Hunold (Air Berlin) and E. Sims (Air New Zealand) have much to say about the future of airlines and aviation management. Corporate Social Responsibility is one of the top themes to-be and therefore a focus of this book, offering the perspective of the UN Foundation and the social inclusion concept of RUHR.2010, European Capital of Culture. The articles are based on presentations and panel discussions presented at the world's largest tourism congress, the ITB Berlin Convention.

BEHAVIORAL NEUROBIOLOGY OF ANXIETY AND ITS TREATMENT

Springer Science & Business Media The book is part of a series on Current Topics in Behavioral Neurosciences, which has as its focus anxiety and its treatment. We have brought together a distinguished cadre of authors with the aim of covering a broad array of topics related to anxiety disorders, ranging from clinical diagnosis, epidemiology, preclinical neuroscience, and animal models to established and innovative therapeutic approaches. The book aims at bridging these disciplines to provide an update of literature relevant to understanding anxiety, its consequences, and its management. Following is a brief overview of the chapters and their content, meant to serve as a guide to navigating the book. The first section covers clinical aspects of anxiety disorders. Joe Bienvenu and colleagues provide an incisive overview of diagnostic considerations in the anxiety disorders in which they emphasize the strengths and shortcomings of our current nosologic systems. This is followed by a review and update of the epidemiology of anxiety

disorders by Ron Kessler and colleagues, which provides an authoritative survey of anxiety disorder incidence, prevalence, and risk factors. This is complemented by a comprehensive review of the literature on disorders that co-occur with anxiety disorders by Kathleen Merikangas and Sonja Alsemgeest Swanson. Their review highlights the tremendous comorbidity that occurs not only within the anxiety disorders, but also with other mental and physical health conditions.

IRAQ AND THE UNITED STATES

CREATING A STRATEGIC PARTNERSHIP

CSIS If Iraq and the United States are to win the war in any meaningful and lasting sense, they must translate the Strategic Agreement they signed in November 2008 into a lasting and functional strategic partnership. In the process, the United States must put Iraq firmly in the lead, but sustain the kind of aid and advice that will help Iraq make further progress in political accommodation, the quality of governance, economic development, and security. The CSIS Burke Chair in Strategy conducted a detailed analysis of the current situation in Iraq, the challenges Iraq faces, and the actions the United States needs to take to help Iraq meet those challenges. Its report provides a detailed risk assessment of current and potential levels of violence in Iraq. It addresses the levels of political accommodation and stability and the problems Iraq still faces in the aftermath of the national election. It also addresses the opportunities and problems in developing Iraq's petroleum sector; investment and development issues in other sectors, the problems in the Iraqi budget forecasts, and progress in Iraqi reconstruction. It evaluates the need for continued economic aid and advice and describes U.S. options for extending such assistance. The concluding section examines progress in creating Iraqi military and police forces. It examines the role the United States can play in helping Iraq further develop such forces and analyzes what a strategic partnership, based on the Strategic Agreement, should mean.

ANIMAL ACOUSTIC COMMUNICATION

SOUND ANALYSIS AND RESEARCH METHODS

Springer Science & Business Media The last decades have brought a significant increase in research on acoustic communication in animals. Publication of scientific papers on both empirical and theoretical aspects of this topic has greatly

increased, and a new journal, *Bioacoustics*, is entirely devoted to such articles. Coupled with this proliferation of work is a recognition that many of the current issues are best approached with an interdisciplinary perspective, requiring technical and theoretical contributions from a number of areas of inquiry that have traditionally been separated. With the notable exception of a collection edited by Lewis (1983), there have been few volumes predominately focused on technical issues in comparative bioacoustics to follow up the early works edited by Lanyon and Tavolga (1960) and Busnel (1963). It was the tremendous growth of expertise concerning this topic in particular that provided the initial impetus to organize this volume, which attempts to present fundamental information from both theoretical and applied aspects of current bioacoustics research. While a completely comprehensive review would be impractical, this volume offers a basic treatment of a wide variety of topics aimed at providing a conceptual framework within which researchers can address their own questions. Each presentation is designed to be useful to the broadest possible spectrum of researchers, including both those currently working in any of the many and diverse disciplines of bioacoustics, and others that may be new to such studies.

DISENTANGLING BARE NOUNS AND NOMINALS INTRODUCED BY A PARTITIVE ARTICLE

Syntax and Semantics "This volume edited by Tabea Ihsane focuses on different aspects of the distribution, semantics, and internal structure of nominal constituents with a "partitive article" in its indefinite interpretation and of potentially corresponding bare nouns. It further deals with diachronic issues, such as grammaticalization and evolution in the use of "partitive articles". The outcome is a snapshot of current research into "partitive articles" and the way they relate to bare nouns, in a cross-linguistic perspective and on new data: the research covers noteworthy data (fieldwork data and corpora) from Standard languages---like French and Italian, but also German---to dialectal and regional varieties, including endangered ones like Francoprovençal"--

ONTOLOGY MATCHING

Springer Science & Business Media Ontologies are viewed as the silver bullet for many applications, but in open or evolving systems, different parties can adopt different ontologies. This increases heterogeneity problems rather than reducing heterogeneity. This book proposes ontology matching as a solution to the problem of semantic heterogeneity, offering researchers and practitioners a uniform framework of reference to currently available work. The techniques presented apply to database schema matching, catalog integration, XML schema matching and more.

EVOLUTION

FROM BIG BANG TO NANOROBOTS

ООО "Издательство "Учитель" The present volume is the fourth issue of the Yearbook series entitled 'Evolution'. The

title of the present volume is 'From Big Bang to Nanorobots'. In this way we demonstrate that all phases of evolution and Big History are covered in the articles of the present Yearbook. Several articles also present the forecasts about future development. The main objective of our Yearbook as well as of the previous issues is the creation of a unified interdisciplinary field of research in which the scientists specializing in different disciplines could work within the framework of unified or similar paradigms, using the common terminology and searching for common rules, tendencies and regularities. At the same time for the formation of such an integrated field one should use all available opportunities: theories, laws and methods. In the present volume, a number of such approaches are used. The volume consists of four sections: Universal Evolutionary Principles; Biosocial Evolution, Ecological Aspects, and Consciousness; Projects for the Future; In Memoriam. This Yearbook will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions, as well as for those who are interested in evolutionary issues of Cosmology, Biology, History, Anthropology, Economics and other areas of study. More than that, this edition will challenge and excite your vision of your own life and the new discoveries going on around us!

CYBERSPACE

MALEVOLENT ACTORS, CRIMINAL OPPORTUNITIES, AND STRATEGIC COMPETITION

Department of the Army "This volume has three parts: the first focuses on cyberspace itself; the second on some of the major forms of malevolence or threats that have become one of its defining characteristics; and the third on possible responses to these threats. One of the most significant features of cyberspace, however, is that it is becoming a risky place for the entire spectrum of users: nation-states, nongovernmental and transnational organizations, commercial enterprises, and individuals. Yet it is a space of opportunities -- for benevolent, neutral, and malevolent actors. Moreover, the authors identify and assess the challenges and threats to security that can arise in cyberspace because of its unique nature. In the final section, the authors discuss a variety of responses, with some suggesting that the most favored options being pursued by the United States are poorly conceived and ill-suited to the tasks at hand"-- Publisher's web site.

THE IRISH MILITARY COLLEGE

A HISTORY

Since its establishment in 1930 the Irish Military College has had a vital influence on not only the Defence Forces but

on the nation. It has formed all of the nation's commissioned officers, many of whom have achieved distinction both within and outside of the Defence Forces. The story of this relatively unknown national institution is intriguing as it has attempted to fulfill the roles laid down for it in 1923 in training and instructing officers and officer candidates. The task has not been easy, as the Military College has inevitably been subject to the many changes and fluctuations in the duties, roles and fortunes of the wider Defence Forces. In this book Colonel Tom Hodson, a former instructor in the Military College and a graduate of École de Guerre, Paris, charts its history. He recounts how from its early predecessor, the Army School of Instruction, the Military College has repeatedly re-invented itself, culminating in the requirement for today's modern institution to embrace and impart instruction based on the needs of the Irish Defence Forces and the procedures of European and NATO armies.

BIOLOGICAL BOUNDARIES OF LEARNING

HISTORY OF STRATEGIC AIR AND BALLISTIC MISSILE DEFENSE: 1945-1955

From the book's Foreword: In the early 1970s, the U.S. Army Center of Military History contracted with BDM Corporation for a history of U.S. efforts to counter Soviet air and missile threats during the Cold War. The resulting two-volume History of Strategic Air and Ballistic Missile Defense covers the years 1945-1972 when the strategic arms competition between the United States and the Soviet Union was at its height. The study was first published for limited distribution in 1975 and recently declassified with minimal redaction. These volumes address the passive and active defense strategies, technologies, and techniques adopted by both U.S. and Soviet defense planners. Much of their actions centered around three common questions: How might we be attacked? How shall we defend our country? What can technology do to solve the basic problems of defending against this new intercontinental threat?

IN BATTLE FOR PEACE

THE STORY OF MY 83RD BIRTHDAY

Oxford University Press **W. E. B. Du Bois** was a public intellectual, sociologist, and activist on behalf of the African American community. He profoundly shaped black political culture in the United States through his founding role in the NAACP, as well as internationally through the Pan-African movement. Du Bois's sociological and historical research on African-American communities and culture broke ground in many areas, including the history of the post-Civil War

Reconstruction period. Du Bois was also a prolific author of novels, autobiographical accounts, innumerable editorials and journalistic pieces, and several works of history. One of the most neglected and obscure books by W. E. B. Du Bois, *In Battle for Peace* frankly documents Du Bois's experiences following his attempts to mobilize Americans against the emerging conflict between the United States and the Soviet Union. A victim of McCarthyism, Du Bois endured a humiliating trial-he was later acquitted-and faced political persecution for over a decade. Part autobiography and part political statement, *In Battle for Peace* remains today a powerful analysis of race in America. With a series introduction by editor Henry Louis Gates, Jr., and an introduction by Manning Marable, this edition is essential for anyone interested in African American history.
