Palliative Care in Oncology

Springer Palliative care provides comprehensive support for severely affected patients with any life-limiting or life-threatening diagnosis. To do this effectively, it requires a disease-specific approach as the patients' needs and clinical context will vary depending on the underlying diagnosis. Experts in the field of palliative care and oncology describe in detail the needs of patients with advanced cancer in comparison to those with non-cancer disease and also identify the requirements of patients with different cancer entities. Basic principles of symptom control are explained, with careful attention to therapy for pain associated with either the cancer or its treatment and to symptom-guided antineoplastic therapy. Complex therapeutic strategies for palliative cancer patients are highlighted that involve both cancer- and symptom-directed options and address a range of therapeutic aims. Issues relating to drug use in palliative cancer care are fully explored, and a separate section is devoted to care in the final phase. A range of organizational and policy issues are also discussed, and the book concludes by considering likely future developments in palliative care for cancer patients. *Palliative Care in Oncology* will be of particular interest to palliative care physicians who are interested in broadening the scope of their disease-specific knowledge, as well as to oncologists who wish to learn more about modern palliative care concepts relevant to their day-to-day work with cancer patients.

With an emphasis on providing a service anywhere in the world, including the important issue of palliative care in the developing nations, *Textbook of Palliative Medicine* offers a genuine alternative to the narrative approach of its competitors, and is an ideal complement to them. It is essential reading for all palliative care physicians in training and in practice, as well as palliative care nurses and other health professionals in the palliative care team

Handbook of Advanced Cancer Care

The cancer itself poses significant challenges related to treatment, and the chemotherapy involved can often induce its own set of issues. In these difficult cases, psychiatric problems and palliative care often come to the forefront of a physician's concerns. The book examines these and other issues, including metabolic, gastrointestinal, respiratory, genitourinary, dermatological, and neurological problems that occur in advanced cancer cases. The book also addresses the unique problems of geriatric patients.

Models and Strategies to Integrate Palliative Care

Principles into Care for People with Serious Illness

Proceedings of a Workshop

National Academies Press Palliative care is the interdisciplinary specialty focused on improving quality of life for people with serious illness and their families. This interdisciplinary care is provided by doctors, nurses, social workers, chaplains and others who work together with the patient's other doctors to provide an extra layer of support. Such care is appropriate for people at any age and at any stage in a serious illness, and can be provided together with curative treatment to address clinical, emotional, psychosocial and spiritual concerns of the patient and their family. To better understand how the principles of palliative care can be integrated into the overall provision of care and services to those facing serious illness, the Roundtable on Quality Care for People with Serious Illness held a public workshop in April 2017. This publication summarizes the presentations and discussions from the workshop.

With a foreword by last edition editor, Professor Sheila Payne, Lancaster University, UK. "I welcome this third edition of Palliative Care Nursing and congratulations to the new team who have provided us with a dynamic and innovative development of a core text for palliative nursing practice. As the largest workforce in palliative care, and given the changing face of clinical practice for nurses, including increased educational opportunity and expanding roles and responsibilities, this book is timely in its focus on critical issues which frame and scope the reality of palliative care and the nursing contribution to that discipline. The learning exercises, in particular, offer tools for educators and clinicians to reflect on practice and understand new ways of knowing in palliative care. It will be an excellent resource for nursing, both in the UK and Ireland and to the wider international audience, having drawn on the breadth of global nursing expertise to bring this book together. Philip Larkin, Professor of Clinical Nursing (Palliative Care), University College Dublin and Our Lady's Hospice and Care Services, Dublin, Ireland; President, European Association for Palliative Care "This is a book of substance that captures the current status of palliative nursing, including the values and research evidence that underpin it. The changing nature of palliative nursing as an evidence-based specialism is balanced with practical skills and insights from experts, and also considers the needs of those working with, or concerned about, the dying person's well-being. It covers a range of challenging issues as well as drawing on the wisdom of those who actually undertake this work on a daily basis. I hope that students and practitioners from all disciplines will find this a useful resource to understand the art and craft of good palliative nursing." Cancer in Context

A Practical Guide to Supportive Care

Oxford Medical Publications This book offers healthcare professionals, academics and anyone affected by cancer a fresh and original approach to the supportive care of people with cancer. Chapter 2 examines the 'lived experience' of people with cancer as they negotiate the many challenges and changes following their diagnosis. Chapter 3 looks at the impact of cancer on the families, partners and carers of people with cancer. Chapter 4 shows that the social and cultural context of someone's life is critical to an understanding of their resources and responses to serious illness. Chapter 5 considers how professionals can help minimise disruption to their patients quality of life as they endure the notorious demands of oncology treatments. Handbook of Communication in Oncology and Palliative Care

OUP Oxford This comprehensive text provides clinicians with practical and evidence-based guidelines to achieve effective, patient-centered communication in the areas of cancer and palliative care. Written by an outstanding panel of international experts, it integrates empirical findings with clinical wisdom, draws on historical approaches and presents a state-of-the-art curriculum for applied communication skills training for the specialist oncologist, surgeon, nurse and other multi-disciplinary team members involved in cancer care today. In this book communication is broken down into key modules that cover the life-cycle of cancer care. They include coverage of diagnosis and treatment including clinical trials, empathic support in response to distress, transition to survivorship or palliative therapies, discussion of prognosis, conduct of family meetings, and care of the dying. Complementary training of patients in their communication with the doctor completes the interactive dyad. The art of teaching, impact of gender and power in the consultation and the ethical context are carefully considered. Special communication challenges include discussion of genetic risk, rehabilitative and salvage surgery, promotion of treatment adherence, unanticipated adverse outcomes, intercultural issues, fertility and sexuality. The value of decision aides, question prompt lists, audio-recording of consultations and use of the internet is illustrated. By looking across the full spectrum of disciplines involved in the multidisciplinary team, discipline-specific issues are considered by experts in each field. In this manner, the needs of patients and their relatives are evaluated, including paediatric and geriatric populations. To achieve all of this, theoretical models are examined from the medical school to the highly specialized practice, facilitation training and actor training are made explicit, and international approaches to communication skills training are compared and contrasted. Finally, research tools that assist in coding cancer consultations, evaluating training courses, and employing mixed methods in studies aid the reader in providing clear and sensitive communication when handling challenging situations whilst treating cancer sufferers and palliative care patients.

Cancer Pain Relief

With a Guide to Opioid Availability

World Health Organization The second edition of a guide, which introduced a simple, yet highly effective method for the relief of cancer pain. Thoroughly revised and updated, the new edition further refines the WHO method, which advocates the use of a small number of relatively inexpensive drugs, including morphine. Revisions draw on experiences with millions of patients around the world as well as new knowledge about the specific pain syndromes unique to cancer. Completely new are chapters describing the international system by which morphine and other opioids are made available for medical purposes. The book has two parts. Part one provides a practical guide to the relief of cancer pain, concentrating on drug treatment as the mainstay of pain management. The most extensive section sets out detailed guidelines for the selection and prescribing of non-opioid analgesics, opioid analgesics, drugs for neuropathic pain, and adjuvant drugs for the treatment of adverse effects, the enhancement of pain relief and the management of concomitant psychological disturbances. Information ranges from explanations of how specific drugs work, through the precautions to take in the presence of certain disorders, to a list of factors that influence the effectiveness of opioids. Concerning the use of opioids, readers are reminded that psychological dependence does not occur in cancer patients and that the only correct dose of morphine is the one that relieves the pain. Part two provides a guide to opioid availability. A discussion of the reasons why opioids continue to be underprescribed or difficult to obtain is followed by an explanation of the Single Convention on Narcotic Drugs.

Communication between care-givers and patients, in a variety of settings, is also discussed. The theme of this book is that palliative care is the best approach to the care of chronically ill and frail elderly because of its focus on: quality of life; support for functional independence; and the centrality of the patient's values and experiences in determining the goals of medical care. Indeed, *Geriatric Palliative Care* provides a comprehensive medical reference for all clinicians who care for older adults.

Palliative Care Nursing

Principles and Evidence for Practice

McGraw-Hill Education (UK) "It has been a true pleasure to have had the opportunity to peruse the second edition of Palliative Care Nursing.... This book, authored predominately by UK-based experts, succeeds in presenting sophisticated thoughts in readily accessible language... Each chapter begins with a summary of key points, with both classic and new relevant literature well integrated into the text. I have also been particularly impressed with the editors' final chapter, in which they synthesize a number of crucial issues for the future development of palliative care... this second edition makes a significant contribution to both the palliative care literature as well as to nursing literature." Carol Tishelman, Karolinska Institutet, Stockholm, Sweden "I find Palliative Care Nursing a very attractive book for nurses but also for other disciplines to learn about nursing and to learn about palliative care. The book is voluminous, informative and educationally well constructed. Frameworks and models in this book will give nurses the opportunity to make up their own process to offer support and be a carer for the incurably ill person and his/her family as a skilled companion.... This book gives the possibility for nurses to spread one clear voice about palliative care nursing. Congratulations to all the authors...." Martine De Vlieger, Palliatieve Hulpverlening Antwerpen v.z.w., University of Antwerp, Belgium "This book should be compulsory reading for nurses and other health care workers who are involved in the care of people in the final stages of life. It provides a comprehensive account of the major issues (clinical, professional, sociological and political) that confront contemporary palliative care while also offering strategies to move forward. The 'real world' of palliative care is described and critiqued and the rhetoric is dispensed with. This book is a vital resource for nursing practice, learning and teaching." Associate Professor, Peter Hudson (RN, PhD). Director of the Centre for Palliative Care Research and Education, St Vincent's Hospital and The University of Melbourne, Australia. "This is an excellent book for anyone completing either an academic qualification or who wants to understand the who, what and where of palliative care both in the UK and abroad. Its detail is balanced with case studies and practical illustrations that bring the academic nature of its writing to life...For reference purposes for anyone completing academic work it has to be an absolute must." Nursing Times The second edition of this innovative textbook has been extensively revised and updated to reflect new global developments in palliative care. This textbook reviews current research and examines the evidence base for palliative care policy and practice. Over a third of the chapters are newly commissioned from leading international contributors. Building on the widely acclaimed original edition, the textbook focuses on palliative care for adults in a variety of care environments. The first three sections use a novel framework - the trajectory of life-limiting illness - to cover key issues including: What happens to people as they become ill How individuals cope as they near death and are dying How families and friends deal with bereavement and loss The final section addresses contemporary issues in nursing and inter-professional working. The book is written with helpful overviews and in an informative and reader-friendly style. There are numerous examples of clinical situations and research studies which are examined in depth to illustrate debates in palliative care. The textbook spans the range of end-of-life contexts which are of relevance to practitioners, educationalists and researchers. Palliative Care Nursing is essential reading for post-qualification nursing students and all nurses and health and social care professionals who provide care to people with advanced illness and those who are near the end of life. This broad ranging critical text will be invaluable to students and practitioners working with people and their families near the end of life.

Delivering High-Quality Cancer Care

Charting a New Course for a System in Crisis

National Academies Press In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. *Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis* presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve

the quality of care. **Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis** provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

Surgical Palliative Care

OUP Oxford Surgical Palliative Care describes the principles and practice of surgery in the context of palliative and supportive care. Surgery is often considered too invasive to be useful in palliation and clinicians instinctively turn to radiotherapy, chemotherapy, and other drugs. Surgery, with increasingly minimal access techniques, may be simpler and less invasive than other treatments and produces excellent palliation. Indeed, most types of surgery are not curative and the aim of this book is to alert all concerned with palliative care to the usefulness and appropriateness of a surgical option. The text is divided into two sections; the first dealing with general issues, varying from quality of life measurement to spirituality, and the second illustrating their application in different specialties of surgery ranging from neurosurgery to urology. The book ends with a challenge to surgeons to change their perspective from curative surgery, in terms of simply cure or failure, to improvement in quality of life and relief of symptoms. Aimed primarily at palliative medicine and pain consultants, this book will also appeal to surgeons who increasingly need to know more about palliative care.

Palliative Care: An Integrated Approach

John Wiley & Sons This evidence-based text brings together the theory and practice of palliative care. It examines all aspects of palliative care i.e. psycho social, spiritual and physical in a highly practical way. The evidence base for cancer care has been developed within the Hospice Movement over the past 50 years and, in the main, it transfers across to patients dying of diseases other than cancer. The book addresses the palliative needs of any patient with any disease in any care setting, which gives it a generic approach. This is in line with current government directives. Contributions to care and treatment are considered in a multidisciplinary and complementary way.

Social Aspects of Care

Oxford University Press 'Social Aspects of Care' provides an overview of financial and mental stress illness places, not just on the patient, but on the family as well. This volume contains information on how to support families in palliative care, cultural considerations important in end-of-life care, sexuality and the impact of illness, planning for the actual death, and bereavement.

Psychosocial Issues in Palliative Care

A community based approach for life limiting illness

Oxford University Press Caring for terminally ill patients and their families is challenging. Patients with life limiting illness require the skills of many professionals but also the support of their community. While most clinicians are comfortable in assessing a broad range of physical problems, it is often the psychosocial issues that prove the most complex. These issues range from psychosocial assessment to the treatment and care of patients with life limiting illnesses. Evaluating emotional, social and spiritual needs, in particular, requires excellent teamwork. This fully-updated and expanded new edition takes a comprehensive look at current practice and provision of psychosocial support as applied to a range of palliative care patients. A number of important areas are covered including community approaches of psychosocial care, neonatal palliative care, the provision of psychosocial care to families, the role of volunteers in supporting palliative care professionals, and the needs of the frail elderly, marginalised patients, and those with dementia. Including multiple case study examples, this highly practical text examines current literature and evidence to demonstrate the best research-based practice in psychosocial care. It is an essential resource for professionals working within hospitals and communities in the fields of medicine, nursing, social work, chaplaincy, counselling, primary care, and mental health.
