Imaging Atlas of Human Anatomy E-Book

Elsevier Health Sciences Imaging Atlas of Human Anatomy, 4th Edition provides a solid foundation for understanding human anatomy. Jamie Weir, Peter Abrahams, Jonathan D. Spratt, and Lonie Salkowski offer a complete and 3-dimensional view of the structures and relationships within the body through a variety of imaging modalities. Over 60% new images—showing cross-sectional views in CT and MRI, nuclear medicine imaging, and more—along with revised legends and labels ensure that you have the best and most up-to-date visual resource. This atlas will widen your applied and clinical knowledge of human anatomy. Features orientation drawings that support your understanding of different views and orientations in images with tables of ossification dates for bone development. Presents the images with number labeling to keep them clean and help with self-testing. Features completely revised legends and labels and over 60% new images—cross-sectional views in CT and MRI, angiography, ultrasound, fetal anatomy, plain film anatomy, nuclear medicine imaging, and more—with better resolution for the most current anatomical views. Reflects current radiological and anatomical practice through reorganized chapters on the abdomen and pelvis, including a new chapter on cross-sectional imaging. Covers a variety of common and up-to-date modern imaging—including a completely new section on Nuclear Medicine—for a view of living anatomical structures that enhance your artwork and dissection-based comprehension. Includes stills of 3-D images to provide a visual understanding of moving images.

Autopsy Pathology: A Manual and Atlas

Elsevier Health Sciences A mainstay for pathology residents, Autopsy Pathology is designed with a uniquely combined manual and atlas format that presents today's most complete coverage of performing, interpreting, and reporting post-mortem examinations. This lasting and useful medical reference book offers a practical, step-by-step approach to discussing not only the basics of the specialty, but the performance of specialized autopsy procedures as well. Material is divided into two sections for ease of use: a manual covering specific autopsy procedures, biosafety, generation of autopsy reports, preparation of death certificates, and other essential subjects; and an atlas, organized by organ system, which captures the appearance of the complete spectrum of autopsy findings. Offers expanded coverage of microscopic anatomy. Includes a chapter on performing special dissection procedures that may not be covered during a typical residency. Examines important techniques, such as autopsy photography and radiology, microscopic examination, supplemental laboratory studies, and other investigative approaches. Addresses the latest legal, social, and ethical issues relating to autopsies, as well as quality improvement and assurance. Presents more than 600 full-color photographs depicting common gross and microscopic autopsy findings for every part of the body. Correlates pathologic findings with their clinical causes to enhance diagnostic accuracy. Improved images in the Atlas section provide greater visual understanding. Additional online features include dissection videos demonstrating autopsy techniques; downloadable, commonly used forms for autopsy reports; and calculators for weights and measures. Expert Consult eBook version included with purchase. This enhanced eBook experience offers access to all of the text, figures, images, videos, forms, calculators, and references from the book on a variety of devices.

Renal Disease in Pregnancy

Cambridge University Press This book presents the RCOG Study Group findings on pregnant women with renal problems.

Robbins and Cotran Atlas of Pathology

This new full-color pathology atlas is specifically designed to accompany Robbins and Cotran Pathologic Basis of Disease, 7th Edition. More than 1,200 full-color illustrations richly depict all of the major conditions that are most commonly covered in pathology courses and on the USMLEs. Gross and microscopic pathology images are complemented by full-color conceptual line drawings and corresponding radiologic images.

Fundamentos de Inmunología básica y su correlación clínica

Erik Honigmann de Beraza La inmunología es una ciencia que relativamente tiene poco de conocerse, por lo que los descubrimientos en torno a ella crecen día con día. Esto ha hecho que la cantidad de información actual sea vasta y compleja, dificultando su análisis y entendimiento. Actualmente existen diversos libros de texto, artículos y recursos electrónicos que intentan ser un medio importante para aquellos que se inician en esta ciencia, sin embargo, en muchos casos como en los recursos electrónicos, esta información es errónea y en el caso de los libros de texto y artículos muchos de ellos no se encuentran asequibles. Este material de apoyo ayuda a mejorar el aprendizaje de la materia, ya que cada tema del libro es explicado de una manera sencilla y sintetizada de tal manera que su comprensión sea mucho más rápida. Facilita la lectura y el estudio en el alumno y en caso de querer profundizar más en los temas, se expone la bibliografía al final de cada capítulo. Además de lo anterior, se espera que a futuro el profesionista utilice este material como referencia para las diversas actividades que tenga que realizar, tanto académicamente como profesionalmente. Por ello, en este libro se revisan los temas más importantes y relevantes entorno a la inmunología, dándole un enfoque importante en el área clínica. Para el desarrollo de este material se realizó una investigación documental de diversas fuentes bibliográficas, lo que permitió el desarrollo de seis capítulos. Uno introductorio en donde se habla sobre cómo nació la inmunología, algunos conceptos básicos, tales como la diferencia entre inmunología, resistencia e inmunidad, la función que tiene la respuesta inmunológica, su clasificación actual, algunos aspectos que hay que tener en cuenta sobre la inmunidad, las células que forman al sistema inmunológico, una revisión básica sobre su anatomía fisiología e histología del sistema inmunológico y la formación o nacimiento de linfocitos T y B. Un segundo capítulo en donde se repasan los mecanismos inespecíficos de defensa, también llamado inmunidad innata; aquí se realiza una revisión sobre las barreras físicas, químicas y biológicas, sitios inductores de la respuesta inmunológica, el sistema de remoción de partículas, la función de algunas moléculas (péptidos, citocinas, quimiocinas y complemento) frente a agentes extraños, el proceso de inflamación, fiebre y fagocitosis. En el tercer capítulo se revisan los mecanismos específicos de defensa o la inmunidad humoral; aquí se repasan algunos conceptos sobre inmunógenos, antígenos, inmunoglobulinas, la importancia de los linfocitos T y B y el HLA. Del cuarto capítulo al sexto, se revisan temas en donde la inmunología tiene aplicación, ya sea para entender enfermedades o para realizar tratamientos alternativos. Por ejemplo, se revisan algunos desórdenes inmunológicos, vacunas en México y en el mundo, sueros e inmunoglobulinas y algunos inmunomoduladores y para finalizar algunas áreas de interés de la inmunología, en donde se discuten temas como la muerte celular, envejecimiento, cáncer y la respuesta inmunológica, inmunología en la obesidad, inmunoparasitología y una nueva área de estudio denominada psiconeuroendocrinoinmunología.

The International System for Serous Fluid Cytopathology

Springer Nature This book is the culmination of an international effort to bring consistency and diagnostic efficiency to effusion cytology for the sake of patient care. The authors recognize special challenges in serous fluid cytopathology, such as reporting the presence of Mullerian epithelium in peritoneal fluids. What is an appropriate serous fluid volume to ensure adequacy? How should mesothelial proliferations be reported and is it appropriate to make an interpretation of malignant mesothelioma? How specific should a report be regarding the origin and subtyping of tumors found in serous fluids? What are the appropriate quality monitors for this specimen type? Special chapters on considerations for peritoneal washings, cytopreparatory techniques, mesothelioma and quality management are included to address these issues. The text contains literature reviews that elucidate existing evidence in support of current practices and recommendations. Expert opinions on where evidence was lacking, the most common practices were adopted by consensus, and where there was no commonality, are employed. Written by experts in the field, The International System for Serous Fluid Cytopathology serves as a collaborative effort between the International Academy of Cytology and the American Society for Cytopathology and calls upon participation of the international cytopathology and oncology communities to contribute to the development of a truly international system for reporting serous fluid cytology

Cardiovascular Pathology

Academic Press Cardiovascular Pathology, Fourth Edition, provides users with a comprehensive overview that encompasses its examination, cardiac structure, both normal and physiologically altered, and a multitude of abnormalities. This updated edition offers current views on interventions, both medical and surgical, and the pathology related to them. Congenital heart disease and its pathobiology are covered in some depth, as are vasculitis and neoplasias. Each section has been revised to reflect new discoveries in clinical and molecular pathology, with new chapters updated and written with a practical approach, especially with regards to the discussion of pathophysiology. New chapters reflect recent technological advances with cardiac devices, transplants, genetics, and immunology. Each chapter is highly illustrated and covers contemporary aspects of the disease processes, including a section on the role of molecular diagnostics and cytogenetics as specifically related to cardiovascular pathology. Customers buy the Print + Electronic product together! Serves as a contemporary, all-inclusive guide to cardiovascular pathology for clinicians and researchers, as well as clinical residents and fellows of pathology, cardiology, cardiac surgery, and internal medicine Offers new organization of each chapter to enable uniformity for learning and reference: Definition, Epidemiology, Clinical Presentation, Pathogenesis/Genetics, Light and Electron Microscopy/Immunohistochemistry, Differential Diagnosis, Treatment and Potential Complications Features six new chapters and expanded coverage of the normal heart and blood vessels, cardiovascular devices, congenital heart disease, tropical and infectious cardiac disease, and forensic pathology of the cardiovascular system Contains 400+ full color illustrations and an online image collection facilitate research, study, and lecture slide creation

The Brain in Search of Itself

Santiago Ramón y Cajal and the Story of the Neuron

Farrar, Straus and Giroux "Passionate and meticulous . . . [Ehrlich] delivers thought-provoking metaphors, unforgettable scenes and many beautifully worded phrases." —Benjamin Labatut, *The New York Times Book Review* The first major biography of the Nobel Prize-winning scientist who discovered neurons and transformed our understanding of the human mind—illustrated with his extraordinary anatomical drawings Unless you're a neuroscientist, Santiago Ramón y Cajal is likely the most important figure in the history of biology you've never heard of. Along with Charles Darwin and Louis Pasteur, he ranks among the most brilliant and original biologists of the nineteenth century, and his discoveries have done for our understanding of the human brain what the work of Galileo and Sir Isaac Newton did for our conception of the physical universe. He was awarded the Nobel Prize in 1906 for his lifelong investigation of the structure of neurons: "The mysterious butterflies of the soul," Cajal called them, "whose beating of wings may one day reveal to us the secrets of the mind." And he produced a dazzling oeuvre of anatomical drawings, whose alien beauty grace the pages of medical textbooks and the walls of museums to this day. Benjamin Ehrlich's *The Brain in Search of Itself* is the first major biography in English of this singular figure, whose scientific odyssey mirrored the rocky journey of his beloved homeland of Spain into the twentieth century. Born into relative poverty in a mountaintop hamlet, Cajal was an enterprising and unruly child whose ambitions were both nurtured and thwarted by his father, a country doctor with a flinty disposition. A portrait of a nation as well a biography, *The Brain in Search of Itself* follows Cajal from the hinterlands to Barcelona and Madrid, where he became an illustrious figure—resisting and ultimately transforming the rigid hierarchies and underdeveloped science that surrounded him. To momentous effect, Cajal devised a theory that was as controversial in his own time as it is universal in ours: that the nervous system is comprised of individual cells with distinctive roles, just like any other organ in the body. In one of the greatest scientific rivalries in history, he argued his case against Camillo Golgi and prevailed. In our age of neuro-imaging and investigations into the neural basis of the mind, Cajal is the artistic and scientific forefather we must get to know. *The Brain in Search of Itself* is at once the story of how the brain as we know it came into being and a finely wrought portrait of an individual as fantastical and complex as the subject to which he devoted his life.

HISTOLOGIA Y EMBRIOLOGIA HUMANA

Stretching Anatomy-2nd Edition

Human Kinetics *Stretching Anatomy, Second Edition*, is a visual guide to 86 stretches for increasing range of motion, muscular strength, stamina, posture, and flexibility. Step-by-step instructions describe how to perform each stretch, while 110 full-color anatomical illustrations highlight the primary muscles and surrounding structures engaged.

Manual of Neonatal Care

Lippincott Williams & Wilkins This edition of the *Manual of Neonatal Care* has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

Robbins & Cotran Pathologic Basis of Disease E-Book

Elsevier Health Sciences The *Color Atlas of Veterinary Anatomy volume 2* presents a unique photographic record of dissections showing the topographical anatomy of the horse. With this book you will be able to see the position and relationships of the bones, muscles, nerves, blood vessels and viscera that go to make up each region of the body and each organ system. Each book in this 3 volume series is packed with full-color photographs and drawings of dissections prepared specifically for these texts. Key features Accessibly and systematically structured with each chapter devoted to a specific body region Important features of regional and topographical anatomy presented using full color photos of detailed dissections Dissections presented in the standing position Detailed color line drawings clarify

the relationships of relevant structures Presents anatomy in a clinical context This new edition second edition offers important new features, including: Accompanying website presents over 100 interactive quizzes and self-assessment questions Many more radiographs throughout Additional CT and MRI images Clinical notes highlight areas of particular clinical significance

Pathology

Lippincott Williams & Wilkins The updated Third Edition of Rubin and Farber's Pathology retains the features that make this text a favorite in medical schools--contemporary coverage, distinguished contributing authors, student-friendly format, and hundreds of full-color photomicrographs, color drawings, and colorful charts and other graphics throughout. The Third Edition's highlights include 300 new full-color photomicrographs, completely updated graphics throughout, and major revisions to chapters on developmental and genetic diseases, immunopathology, neoplasia, blood vessels, and infectious and parasitic diseases. The text provides students with the foundations of general and systemic pathology for a solid understanding of pathogenesis and how it relates to clinical medicine. A consistent, orderly presentation of each disease--definition, epidemiology, pathogenesis, pathology, clinical features--helps focus the student's attention and makes key facts easier to remember. Bullets and boldface type are strategically used to highlight important points.

Globally Harmonized System of Classification and Labelling of Chemicals (GHS)

United Nations The Globally Harmonized System of Classification and Labelling of Chemicals (GHS) addresses classification and labelling of chemicals by types of hazards. It provides the basis for worldwide harmonization of rules and regulations on chemicals and aims at enhancing the protection of human health and the environment during their handling, transport and use by ensuring that the information about their physical, health and environmental hazards is available. The sixth revised edition includes, inter alia, a new hazard class for desensitized explosives and a new hazard category for pyrophoric gases; miscellaneous amendments intended to further clarify the criteria for some hazard classes (explosives, specific target organ toxicity following single exposure, aspiration hazard, and hazardous to the aquatic environment) and to complement the information to be included in section 9 of the Safety Data Sheet; revised and further rationalized precautionary statements; and an example of labelling of a small packaging in Annex 7.

The Healing Hand

Man and Wound in the Ancient World

Harvard University Press This journey to the beginnings of the physician's art brings to life the civilizations of the ancient world--Egypt of the Pharaohs, Greece at the time of Hippocrates, Rome under the Caesars, the India of Ashoka, and China as Mencius knew it. Probing the documents and artifacts of the ancient world with a scientist's mind and a detective's eye, Guido Majno pieces together the difficulties people faced in the effort to survive their injuries, as well as the odd, chilling, or inspiring ways in which they rose to the challenge. In asking whether the early healers might have benefited their patients, or only hastened their trip to the grave, Dr. Majno uncovered surprising answers by testing ancient prescriptions in a modern laboratory. Illustrated with hundreds of photographs, many in full color, and climaxed ten years of work, The Healing Hand is a spectacular recreation of man's attempts to conquer pain and disease.
