The Trillion Dollar Shift Routledge Winner of the Gold Axiom Business Book Award 2019 in the Philanthropy / Non Profit / Sustainability category. Over the past 30 years, the world has seen great social improvements. Technology has been developing at an enormous pace and is helping to solve our most pressing social and environmental challenges. Yet, despite this success, our current model of development is still deeply problematic. Natural disasters triggered by climate change have doubled since the 1980s, violence and armed conflict now cost more than 13 percent of GDP, social inequality and youth unemployment is worsening around the world, and climate change threatens the global population with tremendous environmental as well as social problems. Using the United Nations Sustainable Development Goals as a framework, this book sets out how business and capital now have a real opportunity to help resolve these problems. With clear and plentiful examples and cases of how businesses are making a difference, relevant facts and figures to support the cases, and inspiring and instructional information on how businesses can create sustainable value, this highly readable book is a must-read for businesses (large and small) that wish to genuinely support the delivery of the SDGs. The Paris Climate Agreement and the Sustainable Development Goals (SDGs) drive change and offer a narrative and an opportunity to all to speak in one language on sustainability. They provide us with a clear set of targets for 2030. In short, the virtual anatomy of the Web remains relatively uninvestigated. *The Web's Awake* attempts to seriously explore this gap, citing a number of provocative, yet objective, similarities from studies relating to both real world and digital systems. Analyzing primarily painting - in manuscripts and albums, on walls and on lacquered, painted pen boxes and caskets - but also the related arts of sculpture, ceramics, and metalwork, the author finds that the underlying themes depicted on them through the ages are remarkably consistent. Eleanor Sims demonstrates that all these arts display similar concerns: kingship and legitimacy; the righteous exercise of princely power and the defense of national territory; and the performance of rituals and the religious duties called for by the paramount cult of the day. She describes a variety of superb works of art inside and outside these categories, noting not only how they illustrate archetypal themes but also what it is about them that is unique. She also discusses the ways that Iranian art both influenced and was influenced by invaders and neighboring lands. Boris I. Marshak discusses pre-Islamic and also Central Asian art, in particular the earliest Iranian wall paintings and their pictorial parallels in rock carvings and metalwork, and the richly painted temples and houses of Panjikent. Ernst J. Grube considers religious imagery, and provides an informative bibliography. **Carbon Dioxide Capture and Storage Special Report of the Intergovernmental Panel on Climate Change Cambridge University Press** IPCC Report on sources, capture, transport, and storage of CO<sub>2</sub>, for researchers, policy-makers and engineers. **The Psychic Life of Power Theories in Subjection Stanford University Press** Judith Butler's new book considers the way in which psychic life is generated by the social operation of power, and how that social operation of power is concealed and fortified by the psyche that it produces. In this business-as-usual approach, large-scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources, often without consideration of how those activities impact the future health or productivity of those same resources. This has led to aquatic ecosystems being viewed and treated as limitless resources; the marine environment becoming a dumping ground for waste; overfishing diminishing fishing stocks; ocean habitats being degraded from coastal developments; sea-level rise impacting coastal communities and infrastructure; increasing ocean acidification; and the marginalisation of poor coastal communities. Recognising the failings of the traditional ocean economy, there is a transition underway around the world towards the Blue Economy. This concept moves beyond the business-as-usual approach with economic development and ocean health complementary to one another. In the Blue Economy, the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced. Therefore, economic activity is in balance with the long-term capacity of the ocean ecosystems to support this activity and remain healthy and resilient. This book will provide an overview of the various technologies used to promote cross-sectoral and multi-scalar collaboration, facilitate the integrated management of sectors and resources, foster partnerships between governments and industry, encourage R&D in new technologies in resource use and management, and scale-up innovative financing mechanisms in the development of a Blue Economy. Also, the book will contain in-depth case studies that illustrate how locations, of differing climates, lifestyles and income levels, have implemented technologies to facilitate the development of the Blue Economy. Developing the Blue Economy will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy. **Commerce Business Daily The Official Raspberry Pi Beginner's Guide How to Use Your New Computer The Complete IMS HALDB Guide All You Need to Know to Manage HALDBs** This IBM Redbooks publication describes the High Availability Large Database (HALDB) capability available with IMS.
