Rebel Cities: From the Right to the City to the Urban Revolution *Verso Books* Explores cities as the origin of revolutionary politics, where social and political issues are always at the surface, using examples from such cities as New York City and Mumbai to examine how they can be better ecologically reorganized. **The Art of Planning Selected Essays of Harvey S. Perloff** *Springer Science & Business Media* The work of Harvey S. Perloff stands as a landmark in the evolution of Anglo American planning doctrine. It is impossible to fully capture the essence of the published work in a paragraph, page, or even an entire essay. Yet its highpoints can be identified. His work was innovative, reformist, comprehensive, and oriented toward the future. In emphasizing the greater importance of people compared to things, Perloff repeatedly prodded planners to be concerned with human needs and values. He was critical of the past. But inasmuch as he devoted more effort to envisioning what could lie ahead than in recalling the past, his work was markedly optimistic. He once admitted in writing to his "built-in weakness for expecting rational, socially oriented solutions ultimately to win out, no matter what the objective situation seems to be. " To some the expectation may be seen as naive; to others, as a faith in the wisdom of humankind to take the best course. However received, Perloff's optimism served as a powerful stimulant to keep moving ahead for the best that would come of it. Institutions and the ways they should be shaped and reshaped were of central concern, for institutions (though he rarely used the term) were the instruments through which "knowledge was translated into action. **The Ways of the World** *Oxford University Press* David Harvey is one of most famous Marxist intellectuals in the past half century, as well as one of the world's most cited social scientists. Beginning in the early 1970s with his trenchant and still-relevant book **Social Justice and the City** and through this day, Harvey has written numerous books and dozens of influential essays and articles on

topics across issues in politics, culture, economics, and social justice. In *The Ways of the World*, Harvey has gathered his most important essays from the past four decades. They form a career-spanning collection that tracks not only the development of Harvey over time as an intellectual, but also a dialectical vision that gradually expanded its reach from the slums of Baltimore to global environmental degradation to the American imperium. While Harvey's coverage is wide-ranging, all of the pieces tackle the core concerns that have always animated his work: capitalism past and present, social change, freedom, class, imperialism, the city, nature, social justice, postmodernity, globalization, and the crises that inhere in capitalism. A career-defining volume, *The Ways of the World* will stand as a comprehensive work that presents the trajectory of Harvey's lifelong project in full. *Spaces of Global Capitalism A Theory of Uneven Geographical Development* *Verso Books* Fiscal crises have cascaded across much of the developing world with devastating results, from Mexico to Indonesia, Russia and Argentina. The extreme volatility in contemporary political economic fortunes seems to mock our best efforts to understand the forces that drive development in the world economy. David Harvey is the single most important geographer writing today and a leading social theorist of our age, offering a comprehensive critique of contemporary capitalism. In this fascinating book, he shows the way forward for just such an understanding, enlarging upon the key themes in his recent work: the development of neoliberalism, the spread of inequalities across the globe, and 'space' as a key theoretical concept. Both a major declaration of a new research programme and a concise introduction to David Harvey's central concerns, this book will be essential reading for scholars and students across the humanities and social sciences. *Complexity, Cognition and the City* *Springer* *Complexity, Cognition and the City* aims at a deeper understanding of urbanism, while invoking, on an equal footing, the contributions both the hard and soft sciences have made, and are still making, when grappling with the many issues and facets of regional planning and dynamics. In this work, the author goes beyond merely seeing the city as a self-organized, emerging pattern of some collective interaction between many stylized urban "agents" - he makes the crucial step of attributing cognition to his agents and thus raises, for the first time, the question on how to deal with a complex system composed of many interacting complex agents in clearly defined settings. Accordingly, the author eventually addresses issues of practical relevance for urban planners and decision makers. The book unfolds its message in a largely nontechnical manner, so as to provide a broad interdisciplinary readership with insights, ideas, and other stimuli to encourage further research - with the twofold aim of further pushing back the boundaries of complexity science and emphasizing the all-important interrelation of hard and soft sciences in recognizing the cognitive sciences as another necessary ingredient for meaningful urban studies. *Designing Climate Solutions A Policy Guide for Low-Carbon Energy* *Island Press* With the effects of climate change already upon us, the need to cut global

greenhouse gas emissions is nothing less than urgent. It's a daunting challenge, but the technologies and strategies to meet it exist today. A small set of energy policies, designed and implemented well, can put us on the path to a low carbon future. Energy systems are large and complex, so energy policy must be focused and cost-effective. One-size-fits-all approaches simply won't get the job done. Policymakers need a clear, comprehensive resource that outlines the energy policies that will have the biggest impact on our climate future, and describes how to design these policies well. **Designing Climate Solutions: A Policy Guide for Low-Carbon Energy** is the first such guide, bringing together the latest research and analysis around low carbon energy solutions. Written by Hal Harvey, CEO of the policy firm Energy Innovation, with Robbie Orvis and Jeffrey Rissman of Energy Innovation, **Designing Climate Solutions** is an accessible resource on lowering carbon emissions for policymakers, activists, philanthropists, and others in the climate and energy community. In Part I, the authors deliver a roadmap for understanding which countries, sectors, and sources produce the greatest amount of greenhouse gas emissions, and give readers the tools to select and design efficient policies for each of these sectors. In Part II, they break down each type of policy, from renewable portfolio standards to carbon pricing, offering key design principles and case studies where each policy has been implemented successfully. We don't need to wait for new technologies or strategies to create a low carbon future—and we can't afford to. **Designing Climate Solutions** gives professionals the tools they need to select, design, and implement the policies that can put us on the path to a livable climate future. **Marxism and the City** *Oxford University Press* In this work, Katznelson critically analyzes the development of Marxist scholarship on cities in the last quarter century. He demonstrates how some of the most important weaknesses in Marxism as a social theory can be remedied by forcing it to seriously engage with cities and spatial concerns, and explains the significant shortcomings even of this "improved" Marxism. Katznelson explores how a Marxism that is open to engagement with other social-theoretical traditions can help illuminate our understanding of cities and the patterns of class and group formation that have characterized urban life in the West. **Social Justice and the City** *University of Georgia Press* Throughout his distinguished and influential career, David Harvey has defined and redefined the relationship between politics, capitalism, and the social aspects of geographical theory. Laying out Harvey's position that geography could not remain objective in the face of urban poverty and associated ills, **Social Justice and the City** is perhaps the most widely cited work in the field. Harvey analyzes core issues in city planning and policy--employment and housing location, zoning, transport costs, concentrations of poverty--asking in each case about the relationship between social justice and space. How, for example, do built-in assumptions about planning reinforce existing distributions of income? Rather than leading him to liberal, technocratic solutions, Harvey's line of inquiry pushes him in the direction of a "revolutionary geography," one

that transcends the structural limitations of existing approaches to space. Harvey's emphasis on rigorous thought and theoretical innovation gives the volume an enduring appeal. This is a book that raises big questions, and for that reason geographers and other social scientists regularly return to it. *The New Imperialism* OUP Oxford People around the world are confused and concerned. Is it a sign of strength or of weakness that the US has suddenly shifted from a politics of consensus to one of coercion on the world stage? What was really at stake in the war on Iraq? Was it all about oil and, if not, what else was involved? What role has a sagging economy played in pushing the US into foreign adventurism and what difference does it make that neo-conservatives rather than neo-liberals are now in power? What exactly is the relationship between US militarism abroad and domestic politics? These are the questions taken up in this compelling and original book. Closely argued but clearly written, 'The New Imperialism' builds a conceptual framework to expose the underlying forces at work behind these momentous shifts in US policies and politics. The compulsions behind the projection of US power on the world as a 'new imperialism' are here, for the first time, laid bare for all to see. This new paperback edition contains an Afterword written to coincide with the result of the 2004 American presidential election. *A Brief History of Neoliberalism* Oxford University Press, USA David Harvey, author of 'The New Imperialism' and 'The Condition of Postmodernity', tells the political-economic story of where neoliberalisation came from and how it proliferated on the world stage. *Seventeen Contradictions and the End of Capitalism* Oxford University Press (UK) "David Harvey examines the internal contradictions within the flow of capital that have precipitated recent crises. While the contradictions have made capitalism flexible and resilient, they also contain the seeds of systemic catastrophe"-- *The Turkish AK Party and its Leader* Criticism, opposition and dissent Routledge After landslide electoral victories, two referenda and a presidential election, thirteen years of AK Party rule have shattered many myths regarding Turkey's politics and the nature of the party itself. This book argues that the last thirteen years are best understood via the AK party's interaction with the social-political realm. It focuses on criticism, dissent and opposition from prominent organized groups in Turkish society, which themselves represent significantly different traditions, ideologies and interests. Bringing together specialists from across the field, its chapters explore key societal actors to reveal the dynamics behind the last decade of AK Party rule. Overall, the book throws light on the extent to which the government's characters, trajectories, policies and leadership style have been interactively shaped by opposition and dissent. Exploring the historically unprecedented and politically controversial rule of the AK Party, as well as the relationship between modern societal groups and a government driven by a conservative Islamic tradition, this book is a valuable resource for students and scholars of Turkish studies, as well as politics more generally. *Transforming Distressed Global Communities* Making Inclusive, Safe, Resilient, and Sustainable Cities

Routledge Many of our global cities are distressed and facing a host of issues: economic collapse in the face of rising expectations, social disintegration and civil unrest, and ecological degradation and the threats associated with climate change, including more frequent and more severe natural disasters. Our long-held assumptions about man and nature and how they interact are defunct. We realize now that we can no longer continue to build without addressing the long-term impacts of our actions and their spillovers. Energy and natural resources are finite. The way we configure economies has come into question. In the developed world, especially in the United States, infrastructure and the notions that underpin it are outdated. Meanwhile, the developing world is experiencing major, rapid transformations in lifestyles and economies that are affecting billions of people and requiring a whole new way of planning human settlements. Cities are the key to our future; they represent the most effective vehicle for positive advancements in the human condition and environmental change. This volume argues for the need to redesign and re-plan our cities in holistic ways that reflect our new understanding and relate to their diversity and multi-dimensionality. Presenting a range of case studies from around the world, this volume examines how these distressed cities are dealing with these issues in planning for their future. Alongside these empirical chapters are philosophical essays that consider the future of distressed cities. Bringing together a team of leading scholars, United Nations agencies, non-governmental organizations, private consulting firms, international organizations and foundations, and policy officials, this volume provides a unique and comprehensive overview on how to transform distressed communities into more livable places.

A Companion To Marx's Capital The Complete Edition Verso Books The radical geographer guides us through the classic text of political economy. In recent years, we have witnessed a surge of interest in Marx's work in an effort to understand the origins of our current political and economic crisis. For nearly forty years, David Harvey has written and lectured on *Capital*, becoming one of the world's foremost Marx scholars. Based on his recent lectures, this current volume—finally bringing together his guides to volumes I, II and much of III—presents this depth of learning to a broader audience, guiding first-time readers through a fascinating and deeply rewarding text. *A Companion to Marx's Capital* offers fresh, original, and sometimes critical interpretations of a book that changed the course of history and, as Harvey intimates, may do so again.

Neoliberalism, Cities and Education in the Global South and North Routledge Across the world, cities are being reshaped in myriad ways by neoliberal forms of globalization, a process of urban restructuring with significant implications for educational policy and practices. The chapters in this collection speak to two complementary but analytically distinguishable aspects of the interplay between education, globalization, cities, and neoliberalism. The first aspect relates to the macro relationships between these powerful global forces on the one hand, and cities and their schools on the other. In particular the book considers the stratifying dynamics that

exacerbate already existing inequalities related to race, ethnicity, language, class, and gender—inequalities entailing differential access to the city’s various resources. The second aspect deals with the cultural politics, and logics, of these changes in the city. This recognises that globalization is not simply imposed on the city, but rather becomes insinuated into its fabric through the actions and the agency of local actors and social movements. Against this backdrop, the chapters document how the educational politics of urban contexts in the United States, India, Canada, South Africa and Brazil should be understood as sites in which neoliberal forms of globalization are localised, reproduced, and potentially contested. This book was originally published as a special issue of *Discourse: Studies in the Cultural Politics of Education*. **World Cities Report 2016 Urbanization and Development - Emerging Futures** *United Nations* The analysis of urban development of the past twenty years presented in this maiden edition of the **World Cities Report** shows, with compelling evidence, that there are new forms of collaboration and cooperation, planning, governance, finance and learning that can sustain positive change. The Report unequivocally demonstrates that the current urbanization model is unsustainable in many respects. It conveys a clear message that the pattern of urbanization needs to change in order to better respond to the challenges of our time, to address issues such as inequality, climate change, informality, insecurity, and the unsustainable forms of urban expansion. **World Cities and Nation States** *John Wiley & Sons* **World Cities and Nation States** takes a global perspective to show how national governments and states/provinces/regions continue to play a decisive, and often positive, partnership role with world cities. The 16 chapter book - comprised of two introductory chapters, 12 central chapters that draw on case studies, and two summary chapters - draws on over 40 interviews with national ministers, city government officials, business leaders and expert academics. **Rural Water Supply in Africa Building Blocks for Handpump Sustainability** *WEDC, Loughborough University* This book is designed to assist those responsible for planning, implementing and supporting rural water supply programmes to increase sustainability. **Revolution without Revolutionaries Making Sense of the Arab Spring** *Stanford University Press* The revolutionary wave that swept the Middle East in 2011 was marked by spectacular mobilization, spreading within and between countries with extraordinary speed. Several years on, however, it has caused limited shifts in structures of power, leaving much of the old political and social order intact. In this book, noted author Asef Bayat—whose *Life as Politics* anticipated the Arab Spring—uncovers why this occurred, and what made these uprisings so distinct from those that came before. **Revolution without Revolutionaries** is both a history of the Arab Spring and a history of revolution writ broadly. Setting the 2011 uprisings side by side with the revolutions of the 1970s, particularly the Iranian Revolution, Bayat reveals a profound global shift in the nature of protest: as acceptance of neoliberal policy has spread, radical revolutionary impulses have diminished. Protestors call for reform

rather than fundamental transformation. By tracing the contours and illuminating the meaning of the 2011 uprisings, Bayat gives us the book needed to explain and understand our post-Arab Spring world. **Strengthening Forensic Science in the United States A Path Forward** *National Academies Press* Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. **Strengthening Forensic Science in the United States: A Path Forward** provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators. **Modern Coliseum Stadiums and American Culture** *University of Pennsylvania Press* In **Modern Coliseum**, Benjamin D. Lisle tracks changes in stadium design and culture since World War II. Featuring over seventy-five images documenting the transformation of the American stadium over time, **Modern Coliseum** will be of interest to a variety of readers, from urban and architectural historians to sports fans. **Re-shaping Cities How Global Mobility Transforms Architecture and Urban Form** *Routledge* How are building types such as skyscrapers, mosques or living history museums imported, adapted and contested in different societies? The rise of globalisation has granted cities unprecedented significance, both politically and economically, leading to benefits and problems at national and international levels. **The Handbook of Emerging 21st-Century Cities** explores the changes that are occurring in cities, and the impacts that they are having, at the local, national and global scale. **Urban Commons Rethinking the City** *Routledge* This book rethinks the city by examining its various forms of collectivity - their

atmospheres, modes of exclusion and self-organization, as well as how they are governed - on the basis of a critical discussion of the notion of urban commons. The idea of the commons has received surprisingly little attention in urban theory, although the city may well be conceived as a shared resource. **Urban Commons: Rethinking the City** offers an attempt to reconsider what a city might be by studying how the notion of the commons opens up new understandings of urban collectivities, addressing a range of questions about urban diversity, urban governance, urban belonging, urban sexuality, urban subcultures, and urban poverty; but also by discussing in more methodological terms how one might study the urban commons. In these respects, the rethinking of the city undertaken in this book has a critical dimension, as the notion of the commons delivers new insights about how collective urban life is formed and governed.

U.S. Emergency Management in the 21st Century** *From Disaster to Catastrophe* *Routledge* U.S. Emergency Management in the 21st Century: **From Disaster to Catastrophe** explores a critical issue in American public policy: Are the current public sector emergency management systems sufficient to handle future disasters given the environmental and social changes underway? In this timely book, Claire B. Rubin and Susan L. Cutter focus on disaster recovery efforts, community resilience, and public policy issues of related to recent disasters and what they portend for the future. Beginning with the external societal forces influencing shifts in policy and practice, the next six chapters provide in-depth accounts of recent disasters— the Joplin, Tuscaloosa-Birmingham, and Moore tornadoes, Hurricanes Sandy, Harvey, Irma, Maria, and the California wildfires. The book concludes with a chapter on loss accounting and a summary chapter on what has gone right, what has gone wrong, and why the federal government may no longer be a reliable partner in emergency management. Accessible and clearly written by authorities in a wide-range of related fields with local experiences, this book offers a rich array of case studies and describes their significance in shifting emergency management policy and practice, in the United States during the past decade. Through a careful blending of contextual analysis and practical information, this book is essential reading for students, an interested public, and professionals alike.

The Ninth Beethoven and the World in 1824 *Random House Trade Paperbacks* The premier of Beethoven's Ninth Symphony in Vienna on May 7, 1824, was the most significant artistic event of the year—and the work remains one of the most precedent-shattering and influential compositions in the history of music. Described in vibrant detail by eminent musicologist Harvey Sachs, this symbol of freedom and joy was so unorthodox that it amazed and confused listeners at its unveiling—yet it became a standard for subsequent generations of creative artists, and its composer came to embody the Romantic cult of genius. In this unconventional, provocative book, Beethoven's masterwork becomes a prism through which we may view the politics, aesthetics, and overall climate of the era. Part biography, part history, part memoir, *The Ninth* brilliantly explores the intricacies of Beethoven's last symphony—how it brought forth the power of the individual while celebrating the collective spirit of humanity.

Cities Transformed Demographic Change and Its Implications in the Developing World *Routledge* Over the next 20 years, most low-income countries will, for the first time, become more urban than rural. Understanding demographic trends in the cities of the developing world is critical to those countries - their societies, economies, and environments. The benefits from urbanization cannot be overlooked, but the speed and sheer scale of this transformation presents many challenges. In this uniquely thorough and authoritative volume, 16 of the world's leading scholars on urban population and development have worked together to produce the most comprehensive and detailed analysis of the changes taking place in cities and their implications and impacts. They focus on population dynamics, social and economic differentiation, fertility and reproductive health, mortality and morbidity, labor force, and urban governance. As many national governments decentralize and devolve their functions, the nature of urban management and governance is undergoing fundamental transformation, with programs in poverty alleviation, health, education, and public services increasingly being deposited in the hands of untested municipal and regional governments. *Cities Transformed* identifies a new class of policy maker emerging to take up the growing responsibilities. Drawing from a wide variety of data sources, many of them previously inaccessible, this essential text will become the benchmark for all involved in city-level research, policy, planning, and investment decisions. The National Research Council is a private, non-profit institution based in Washington, DC, providing services to the US government, the public, and the scientific and engineering communities. The editors are members of the Council's Panel on Urban Population Dynamics.

Economy for the Common Good A Common Standard for a Pluralist World? *trdition* This books brings together scholarly works on the Economy for the Common Good (ECG), both from conceptual and empirical perspectives. The contributions were presented at the first-ever international scientific conference on

this topic in Bremen, Germany, organised by the School of Graduate and Professional Studies (Institut für Wissenschaftliche Weiterbildung) of Hochschule Bremen - City University of Applied Sciences and the Research Council of the Economy for the Common Good (Forschungsverein der Gemeinwohlökonomie e.V.) in November 2019. The Economy for the Common Good (ECG) can be considered as a new approach in-line with several socio-economic and political approaches that aim to frame economic activity within ecological and social boundaries. But different to other approaches, the ECG aims to embed economic activities into a broader cultural and social context and to link them with the core human values of dignity, solidarity, social justice, environmental sustainability, democracy and transparency. The movement started in 2010 with the publication of the book "Gemeinwohl-Ökonomie" (Economy for the Common Good) by Christian Felber and the presentation of a first version of the common good balance sheet by a group of Austrian entrepreneurs. Since then, the movement has spread from the German-speaking countries to other countries, especially in Europe and Latin America.

The Urban Revolution *U of Minnesota Press* Originally published in 1970, *The Urban Revolution* marked Henri Lefebvre's first sustained critique of urban society, a work in which he pioneered the use of semiotic, structuralist, and poststructuralist methodologies in analyzing the development of the urban environment. Although it is widely considered a foundational book in contemporary thinking about the city, *The Urban Revolution* has never been translated into English—until now. This first English edition, deftly translated by Robert Bononno, makes available to a broad audience Lefebvre's sophisticated insights into the urban dimensions of modern life. Lefebvre begins with the premise that the total urbanization of society is an inevitable process that demands of its critics new interpretive and perceptual approaches that recognize the urban as a complex field of inquiry. Dismissive of cold, modernist visions of the city, particularly those embodied by rationalist architects and urban planners like Le Corbusier, Lefebvre instead articulates the lived experiences of individual inhabitants of the city. In contrast to the ideology of urbanism and its reliance on commodification and bureaucratization—the capitalist logic of market and state—Lefebvre conceives of an urban utopia characterized by self-determination, individual creativity, and authentic social relationships. A brilliantly conceived and theoretically rigorous investigation into the realities and possibilities of urban space, *The Urban Revolution* remains an essential analysis of and guide to the nature of the city.

Henri Lefebvre (d. 1991) was one of the most significant European thinkers of the twentieth century. His many books include *The Production of Space* (1991), *Everyday Life in the Modern World* (1994), *Introduction to Modernity* (1995), and *Writings on Cities* (1995). Robert Bononno is a full-time translator who lives in New York. His recent translations include *The Singular Objects of Architecture* by Jean Baudrillard and Jean Nouvel (Minnesota, 2002) and *Cyberculture* by Pierre Lévy (Minnesota, 2001). *Tourism Development in Japan Themes, Issues and Challenges* *Routledge* This significant and

timely volume focuses on the unique trajectory of tourism development in Japan, which has been characterized by an historical emphasis on promoting both domestic and international tourism to Japanese tourists, followed by the more recent policy of competing aggressively in the international incoming tourist market. Initial chapters present an overview of past and present tourism, including policy and research perspectives. Thematic perspectives on tourism and specific contexts and places in which tourism occurs are then examined. Strains of Japanese tourism such as sport, surf, forest, mountain, urban, tea, pilgrimage and even whaling heritage tourism are among those analyzed. The book also explores tourism's role in confronting difficult pasts and presents, and the challenges facing the development of tourism in contemporary Japan. A short postscript outlines some of the challenges and possible future directions tourism in Japan may take in light of the COVID-19 crisis. Written by a team of well-known editors and contributors, including academics from Japan, this volume will be of great interest to upper-students and researchers and academics in development studies, cultural studies, geography and tourism. The Chicago Manual of Style The Essential Guide for Writers, Editors, and Publishers Searchable electronic version of print product with fully hyperlinked cross-references. *Nourishing Communities From Fractured Food Systems to Transformative Pathways* Springer This edited volume builds on existing alternative food initiatives and food movements research to explore how a systems approach can bring about health and well-being through enhanced collaboration. Chapters describe the myriad ways community-driven actors work to foster food systems that are socially just, embed food in local economies, regenerate the environment and actively engage citizens. Drawing on case studies, interviews and Participatory Action Research projects, the editors share the stories behind community-driven efforts to develop sustainable food systems, and present a critical assessment of both the tensions and the achievements of these initiatives. The volume is unique in its focus on approaches and methodologies that both support and recognize the value of community-based practices. Throughout the book the editors identify success stories, challenges and opportunities that link practitioner experience to critical debates in food studies, practice and policy. By making current practices visible to scholars, the volume speaks to people engaged in the co-creation of knowledge, and documents a crucial point in the evolution of a rapidly expanding and dynamic sustainable food systems movement. Entrenched food insecurity, climate change induced crop failures, rural-urban migration, escalating rates of malnutrition related diseases, and aging farm populations are increasingly common obstacles for communities around the world. Merging private, public and civil society spheres, the book gives voice to actors from across the sustainable food system movement including small businesses, not-for-profits, eaters, farmers and government. Insights into the potential for market restructuring, knowledge sharing, planning and bridging civic-political divides come from across Canada, the United States and Mexico, making this a key resource for

policy-makers, students, citizens, and practitioners. Same-Sex Marriage and Religious Liberty Emerging Conflicts *Rowman & Littlefield Publishers* **Same-Sex Marriage and Religious Liberty** explores the religious freedom implications of defining marriage to include same-sex couples. It represents the only comprehensive, scholarly appraisal to date of the church-state conflicts virtually certain to arise from the legal recognition of same-sex marriage. It explores two principal questions. First, exactly what kind of religious freedom conflicts are likely to emerge if society embraces same-sex marriage? A redefinition of marriage would impact a host of laws where marital status affects legal rights in housing, employment, health-care, education, public accommodations, and property, in addition to family law. These laws, in turn, regulate a host of religious institutions_schools, hospitals, and social service providers, to name a few_that often embrace a different definition of marriage. As a result, church-state conflicts will follow. This volume anticipates where and how these manifold disputes will arise. Second, how might these conflicts be resolved? If the disputes spark litigation under the Free Speech, Free Exercise, or Establishment Clauses of the First Amendment, who will prevail and why? When, if ever, should claims of religious liberty prevail over claims of sexual liberty? Drawing on experience in analogous areas of law, the volume explores whether it is possible to avoid these constitutional conflicts by statutory accommodation, or by separating religious marriage from civil marriage. **Urban Warfare Housing under the Empire of Finance** *Verso Books* **How finance and politics have caused the global housing crisis** The most comprehensive survey of the current crisis, **Urban Warfare** charts how the financial crisis and wider urban politics have left millions homeless and in financial desperation across the world. The financialization of housing has become a global catastrophe, leaving millions desperate and homeless. Since the 2008 financial collapse, models of home ownership, originating in the US and UK, are being exported around the world. Using examples from across the globe, Rolnik shows how our cities have been sold to construction companies and banks, while supported by government-facilitated schemes, such as “the right to buy” subsidies and micro-financing. Our homes and neighbourhoods have become the “last subprime frontiers of capitalism,” organised by those who benefit the most.
