**WHO Guidelines for Indoor Air Quality Dampness and Mould WHO Regional Office Europe** Microbial pollution is a key element of indoor air pollution. It is caused by hundreds of species of bacteria and fungi, in particular filamentous fungi (mould), growing indoors when sufficient moisture is available. This document provides a comprehensive review of the scientific evidence on health problems associated with building moisture and biological agents. The review concludes that the most important effects are increased prevalences of respiratory symptoms, allergies and asthma as well as perturbation of the immunological system. The document also summarizes the available information on the conditions that determine the presence of mould and measures to control their growth indoors. WHO guidelines for protecting public health are formulated on the basis of the review. The most important means for avoiding adverse health effects is the prevention (or minimization) of persistent dampness and microbial growth on interior surfaces and in building structures.

From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. **Parenting Matters** identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States. **Resources in Education Learning with Women in Jail** Creating Community-Based Participatory Research Springer Nature In this monograph, the ethical implications of engaging in research with vulnerable populations is explored and demonstrates how Community Based Participatory Research (CBPR) both enhances the research while addressing these ethical complexities. Although CBPR encompasses different levels of community engagement, in general, the participants, or co-researchers, are involved in the formulation of the research questions and methodologies because they are central to the conversation about what should be researched and how. Participants are directly involved in formulating the study problems and finding solutions, and usually the goal is to create social change that can be applied to and potentially transform the community. **Learning with Women in Jail: Creating Community Based Participatory Research** documents the research process to better understand the causes for incarceration and recidivism. The study used a (CBPR) framework so that the people who had directly experienced incarceration would lead the research as much as possible, from framing the research questions and methodologies to data capture and analysis. **Hidden Dangers to Kids' Learning A Parent Guide to Cope with Educational Roadblocks** R&L Education This second edition to **Hidden Dangers to Kid's Learning: Parent Guide to Cope with Educational Roadblocks** gives more insight into ways parents can understand and help their academically struggling child. We have new reasons to believe in our children and new possibilities to expect and help our children to be able to cope in our global community. **Assessment, Remediation, and Post-Remediation Verification of Mold in Buildings** AIHA Safety and Improvement in Primary Care The Essential Guide CRC Press In recent decades most of the international effort given over to studying and improving the safety of patient care has been focused in acute hospital settings. **Better Teachers, Better Schools** What Star Teachers Know, Believe, and Do IAP We all know teachers who, in the face of insurmountable district and school level challenges, inspire underserved students to succeed. These teachers are more than good? they are 'stars'. Haberman maintains that school districts still gamble when selecting teachers as an overwhelming number are not stars and are unprepared or underprepared to work effectively with marginalized students. Haberman explains that teacher selection is more important than teacher training. The ability to identify educators with the necessary social justice or relational characteristics may lead to an increase in academic achievement among learners as well as lower teacher attrition. Consequently, all those who are interested in building America's teaching force with stars -including human resource managers for K-12 school districts, administrators, teachers, teacher advocates, teacher education faculty and graduate students? will benefit from this book. *Better Teachers, Better Schools* is a must read for two main reasons. First, the achievement gap between 16 million children in poverty and their mainstream counterparts is continuing to become even wider. Many urban students are constantly subjected to educational barriers, which limits their future opportunities. These learners deserve teachers that know more than content, but who can build relationships in order to leverage learning with greater outcomes. Second, Haberman was one of the most prolific producers of teachers to date. He reminds us that quality school systems, built on the back of quality teachers, benefit our society. *Better Teachers, Better Schools* offers a refreshing take on what it means to be a star teacher by sharing some of Haberman's most requested writings as well as new narratives and research that corroborate his star theory. The contributions in this volume give us a window into Haberman's seven relational dispositions of star teachers; or teachers' ideology put into behavior. Also, each chapter contains learning outcomes and reflection questions for discussion.
