The classic air-cooled Volkswagen Beetle, officially the Volkswagen Type 1, is regarded as one of the most important and well-engineered vehicles of the twentieth century. It was the most popular imported car in America in the 1960s, and before that it enjoyed a humble beginning as "the people's car" in its native Germany. *The Complete Book of Classic Volkswagens* encompasses the evolution of the popular Beetle as well as other variations of Volkswagen's air-cooled cars, vans, and trucks. Thoroughly illustrated, this is an invaluable reference to Volkswagen's collectible and iconic cars. The history of VW automobiles is just as colorful as the hues they were manufactured in, and this book illustrates the full story. German automakers originally sought to supply their countrymen with an automobile that was easy to mass produce. By 1938, they finalized the design for the VW "Bug"--the first rear-engined, rear-wheel-drive configured car. In its heyday, the little rounded Beetle was produced at a rate of more than one million per year. Today, with more than 23 million cars

built, the Beetle holds the record as the most-produced passenger car of all time. But the Beetle is only one part of the air-cooled Volkswagen story. The rest--from Type 2 vans, pick-ups, and campers to the Type 113 "Super Beetle"--is included here. If you're the owner of a Volkswagen or if you just love their iconic look and you're interested in their evolution, this book deserves a place on your bookshelf.

Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Cities like Prague, Paris, and Lisbon draw millions of visitors from around the world because of their exquisite architecture, walkable neighborhoods, and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years—not because of traffic, population growth, or other practical hurdles, but because of ill-considered theories emerging from Modernism and reactions to it. The errors of urban design over the

last century are too great not to question. The solutions being offered today—sustainability, walkability, smart and green technologies—hint at what has been lost and what may be regained, but they remain piecemeal and superficial. In *The Art of Classic Planning*, architect and planner Nir Haim Buras documents and extends the time-tested and holistic practices that held sway before the reign of Modernism. With hundreds of full-color illustrations and photographs that will captivate architects, planners, administrators, and developers, *The Art of Classic Planning* restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto, Vienna, and Venice, and by the great successes of L'Enfant's Washington, Haussmann's Paris, and Burnham's Chicago, Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. *The Art of Classic Planning* celebrates the enduring principles of urban design and invites us to return to building beautiful cities." Popular Mechanics Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. *Designing Zero Carbon Buildings Using Dynamic Simulation Methods* Taylor & Francis In addition to the application of fundamental principles that lead to a structured method for zero carbon design of buildings, this considerably expanded second edition includes new advanced topics on multi-objective optimisation; reverse modelling; reduction of the simulation performance gap; predictive control; nature-inspired emergent simulation leading to sketches that become 'alive'; and an alternative economics for achieving the sustainability paradigm. The book features student design work from a Master's programme run by the author, and their design speculation for a human settlement on Mars. Tasks for simple simulation experiments are available for the majority of topics, providing the material for classroom exercise and giving the reader an easy introduction into the field. Extended new case studies of zero carbon buildings are featured in the book, including schemes from Japan, China, Germany, Denmark and the UK, and provide the reader with an enhanced design toolbox to stimulate their own design thinking. The Economical Environmentalist My Attempt to Live a Low-Carbon Life and What it Cost *Routledge* Reducing your carbon emissions in an economic down-turn can be challenging, but saving the planet doesn't have to cost you more. Tough economic times need not relegate concerns for the planet to the back burner. The author is an environmental economist trying to live a low-carbon life in London. He worked for 15 years in the UK's Office of Climate Change, the Prime Minister's Strategy Unit and the Department of the Environment. So far so good. But he has kids. A family to visit in India. A hectic job. In distilling and building on his own experience of trying to live a low carbon life, he helps us navigate the choices that confront us all - families, singletons, pensioners - when making decisions about what to eat, what to buy, how to travel and how to keep warm in the era of climate change and economic turmoil. He works out the sums and lets us know which choices will make the biggest difference, and which are false savings. His book is an irreverent but seriously rigorous reference guide to low-cost, low-carbon living for everyone - in any location - in tough times. It's brimming with up-to-date information on current and future
