Career Development and Systems Theory

Connecting Theory and Practice

Springer Career Development and Systems Theory: Connecting Theory and Practice offers practitioners, researchers and students a comprehensive introduction to, and overview of, career theory; introduces the Systems Theory Framework of career development; and demonstrates its considerable contemporary and innovative application to practice. A number of authors have identified the framework as one of a small number of significant innovations in the career development literature. The Systems Theory Framework of career development was developed to provide coherence to the career development field by providing a comprehensive conceptualisation of the many existing theories and concepts relevant to understanding career development. It is not designed to be a theory of career development; rather systems theory is introduced as the basis for an overarching, or metatheoretical, framework within which all concepts of career development, described in the plethora of career theories, can be usefully positioned and utilised in both theory and practice. It has been applied to the career development of children, adolescents and women. Since its first publication, the Systems Theory Framework has been the basis of numerous publications focusing on theoretical application and integration, practice and research, with a growing number of these by authors other than the framework developers. Its application across cultures also has been emphasised. The theoretical and practical unity of the Systems Theory Framework makes this book a worthy addition to the professional libraries of practitioners, researchers and students, new to, or experienced in, the field of career development.

Just Below the Line

Disability, Housing, and Equity in the South

University of Arkansas Press With America on the brink of the largest number of older adults and persons with disabilities in the country's history, the deceleration in housing production during the first decade of the twenty-first century, and a continued reliance on conventional housing policies and practices, a perfect storm has emerged in the housing industry. The lack of fit between the existing housing stock and the needs of the U.S. population is growing pronounced. Just as housing needed to be retooled at the end of WWII, the American housing industry is in dire need of change today. The South—with its high rates of poverty, older residents, residents with disabilities, extensive rural areas, and out-of-date housing policies and practices—serves as a “canary in the coal mine” for the impending, nationwide housing crisis. *Just Below the Line* discusses how reworking the policies and practices of the housing industry in the South can serve as a model for the rest of the nation in meeting the physical and social needs of persons with disabilities and aging boomers. Policy makers, designers, builders, realtors, advocates, and housing consumers will be able to use this book to promote the production of equitable housing nationwide. Published in collaboration with the Fay Jones School of Architecture.
