Microbial Food Safety

A Food Systems Approach

CABI This interdisciplinary textbook provides the reader with vital information and comprehensive coverage of foodborne microbial pathogens of potential risk to human consumers. It includes human pathogens and toxins originating from plants, fungi and animal products and considers their origin, risk, prevention and control. Implementing a National Cancer Clinical Trials System for the 21st Century

Second Workshop Summary

National Academies Press *The National Clinical Trials Network (NCTN) supported by the National Cancer Institute (NCI) has played an integral role in cancer research and in establishing the standard of care for cancer patients for more than 50 years. Formerly known as the NCI Clinical Trials Cooperative Group Program, the NCTN is comprised of more than 2,100 institutions and 14,000 investigators, who enroll more than 20,000 cancer patients in clinical trials each year across the United States and internationally. Recognizing the recent transformative advances in cancer research that necessitate modernization in how cancer clinical trials are run, as well as inefficiencies and other challenges impeding the national cancer clinical trials program, the NCI asked the IOM to develop a set of recommendations to improve the federally funded cancer clinical trials system. These recommendations were*

published in the 2010 report, *A National Cancer Clinical Trials System for the 21st Century: Reinvigorating the NCI Cooperative Group Program*. In early 2011, the NCPF and the American Society of Clinical Oncology (ASCO) held a workshop in which stakeholders discussed the changes they planned to implement in response to the IOM goals and recommendations. Two years later, on February 11-12, 2013, in Washington, DC, the NCPF and ASCO reconvened stakeholders to report on the changes they have made thus far to address the IOM recommendations. At this workshop, representatives from the NCI, the NCTN, comprehensive cancer centers, patient advocacy groups, the Food and Drug Administration (FDA), industry, and other stakeholders highlighted the progress that has been made in achieving the goals for a reinvigorated national cancer clinical trials system. *Implementing a National Cancer Clinical Trials System for the 21st Century* is a summary of that workshop.

Encyclopedia of Food Safety

Academic Press *With the world's growing population, the provision of a safe, nutritious and wholesome food supply for all has become a major challenge. To achieve this, effective risk management based on sound science and unbiased information is required by all stakeholders, including the food industry, governments and consumers themselves. In addition, the globalization of the food supply requires the harmonization of policies and standards based on a common understanding of food safety among authorities in countries around the world. With some 280 chapters, the Encyclopedia of Food Safety provides unbiased and concise overviews which form in total a comprehensive coverage of a broad range of food safety topics, which may be grouped under the following general categories: History and basic sciences that support food safety; Foodborne diseases, including surveillance and investigation; Foodborne hazards, including microbiological and chemical agents; Substances added to food, both directly and indirectly; Food technologies, including the latest developments; Food commodities, including their potential hazards and controls; Food safety management systems, including their elements and the roles of stakeholders. The Encyclopedia provides a platform for experts from the field of food safety and related fields, such as nutrition, food science and technology and environment to share and learn from state-of-the art expertise with the rest of the food safety community. Assembled with the objective of facilitating the work of those working in the field of food safety and related fields, such as nutrition, food science and technology and environment - this work covers the entire spectrum of food safety topics into one comprehensive reference work The Editors have made every effort to ensure that this work meets strict quality and pedagogical thresholds such as: contributions by the foremost authorities in their fields; unbiased and concise overviews on a multitude of food safety subjects; references for further information, and specialized and general definitions for food safety terminology In maintaining confidence in the safety of the food supply, sound scientific information is key to effectively and efficiently assessing, managing and communicating on food safety risks. Yet, professionals and other specialists working in this multidisciplinary field are finding it increasingly difficult to keep up with developments outside their immediate areas of expertise. This single source of concise, reliable and authoritative information on food safety has, more than ever, become a necessity*

Governance and Public Policy in Canada

A View from the Provinces

University of Toronto Press *Governance and Public Policy in Canada lays the foundation for a systematic analysis of policy developments, shaped as they are by multiple players, institutional tensions, and governance legacies. Arguing that provinces are now the most central site of governance and policy innovation, the book assesses the role of the provinces and places the provincial state in its broader economic, institutional, social, and territorial context. The aim throughout is to highlight the crucial role of provinces in policy changes that directly affect the lives of citizens. Three key themes unify this book. First, it addresses the role of policy convergence and divergence among provinces. Although the analysis acknowledges enduring differences in political culture and institutions, it also points to patterns of policy diffusion and convergence in specific areas in a number of provinces. Second, the book explores the push and pull between centralization and decentralization in Canada as it affects intergovernmental relations. Third, it underscores that although the provinces play a greater role in policy development than ever before, they now face a growing tension between their expanding policy ambitions and their capacity to develop, fund, implement, manage, and evaluate policy programs. Governance and Public Policy in Canada describes how the provincial state has adapted in the context of these changing circumstances to transcend its limited capacity while engaging with a growing number of civil society actors, policy networks, and intergovernmental bodies.*

Cattle in Ancient and Modern Ireland

Farming Practices, Environment and Economy

Cambridge Scholars Publishing Cattle have been the mainstay of Irish farming since the Neolithic began in Ireland almost 6000 years ago. Cattle, and especially cows, have been important in the life experiences of most Irish people, directly and/or through legends such as the Táin Bó Cuailnge (The Cattle-raid of Cooley). In this book, diverse aspects of cattle in Ireland, from the circumstances of their first introduction to recent and ongoing developments in the management of grasslands – still the main food-source for cattle in Ireland – are explored in thirteen essays written by experts. New information is presented, and several aspects relating to cattle husbandry and the interactions of cattle and people that have hitherto received little or no attention are discussed.

Beasts of Burden

Animal and Disability Liberation

The New Press A beautifully written, deeply provocative inquiry into the intersection of animal and disability liberation—and the debut of an important new social critic How much of what we understand of ourselves as "human" depends on our physical and mental abilities—how we move (or cannot move) in and interact with the world? And how much does our definition of "human" depend on its difference from "animal"? Drawing on her own experiences as a disabled person, a disability activist, and an animal advocate, author Sunaura Taylor persuades us to think deeply, and sometimes uncomfortably, about what divides the human from the animal, the disabled from the nondisabled—and what it might mean to break down those divisions, to claim the animal and the vulnerable in ourselves, in a process she calls "cripping animal ethics." Beasts of Burden suggests that issues of disability and animal justice, which have heretofore primarily been presented in opposition, are in fact deeply entangled. Fusing philosophy, memoir, and science—including factory farming, disability oppression, and our assumptions of human superiority over animals—Taylor draws attention to new worlds of experience and empathy that will open up important avenues of solidarity across species and ability. Beasts of Burden is a wonderfully engaging and elegantly written work, both philosophical and personal, by a brilliant debut author.

Ending the War on Artisan Cheese

The Inside Story of Government Overreach and the Struggle to Save Traditional Raw Milk Cheesemakers

Chelsea Green Publishing A prominent food scientist defends the use of raw milk in traditional artisan cheesemaking. Raw milk cheese—cheese made from unpasteurized milk—is an expansive category that includes some of Europe's most beloved traditional styles: Parmigiano Reggiano, Gruyère, and Comté, to name a few. In the United States, raw milk cheese forms the backbone of the resurgent artisan cheese industry, as consumers demand local, traditionally produced, and high-quality foods. Internationally award-winning artisan cheeses like Bayley Hazen Blue (Jasper Hill, VT) would have been unimaginable just forty years ago when American cheese meant Kraft Singles. Unfortunately the artisan cheese industry faces an existential regulatory threat. Over the past thirty years the US Food and Drug Administration (FDA) has edged toward an outright ban on raw milk cheeses. Their assault on traditional cheesemaking goes beyond a debate about raw milk safety; the FDA has also attempted to ban the use of wooden boards, the use of ash in cheese ripening, and has set stringent microbiological criteria that many artisan cheeses cannot meet. The David versus Goliath existence of small producers fighting crushing regulations is true in parts of Europe as well, where beloved creameries are going belly-up or being bought out because they can't comply with EU health ordinances. Centuries-old cheese styles like Fourme d'Ambert and Cantal are nearing extinction, leading Prince Charles to decry the "bacteriological correctness" of European regulators. The dirty secret is that Listeria and other bacterial outbreaks occur in pasteurized cheeses more often than in raw milk cheeses, and traditional processes like ash-ripening have been proven safe. In Ending the War on Artisan Cheese, Dr. Catherine Donnelly forcefully defends traditional cheesemaking, while exposing government actions in the United States and abroad designed to take away food choice under the false guise of food safety. This book is fundamentally about where and how our food is produced, the values we place on methods of food production, and how the roles of tradition, heritage, and quality often conflict with advertising, politics, and profits in influencing our food choices.

Global Meat

Social and Environmental Consequences of the Expanding Meat Industry

[MIT Press](#) *The growth of the global meat industry and the implications for climate change, food insecurity, workers' rights, the treatment of animals, and other issues. Global meat production and consumption have risen sharply and steadily over the past five decades, with per capita meat consumption almost doubling since 1960. The expanding global meat industry, meanwhile, driven by new trade policies and fueled by government subsidies, is dominated by just a few corporate giants. Industrial farming—the intensive production of animals and fish—has spread across the globe. Millions of acres of land are now used for pastures, feed crops, and animal waste reservoirs. Drawing on concrete examples, the contributors to Global Meat explore the implications of the rise of a global meat industry for a range of social and environmental issues, including climate change, clean water supplies, hunger, workers' rights, and the treatment of animals. Three themes emerge from their discussions: the role of government and corporations in shaping the structure of the global meat industry; the paradox of simultaneous rising meat production and greater food insecurity; and the industry's contribution to social and environmental injustice. Contributors address such specific topics as the dramatic increase in pork production and consumption in China; land management by small-scale cattle farmers in the Amazon; the effect on the climate of rising greenhouse gas emissions from cattle raised for meat; and the tensions between economic development and animal welfare. Hard Target

Sanctions, Inducements, and the Case of North Korea

[Stanford University Press](#) *Because authoritarian regimes like North Korea can impose the costs of sanctions on their citizens, these regimes constitute "hard targets." Yet authoritarian regimes may also be immune—and even hostile—to economic inducements if such inducements imply reform and opening. This book captures the effects of sanctions and inducements on North Korea and provides a detailed reconstruction of the role of economic incentives in the bargaining around the country's nuclear program. Stephan Haggard and Marcus Noland draw on an array of evidence to show the reluctance of the North Korean leadership to weaken its grip on foreign economic activity. They argue that inducements have limited effect on the regime, and instead urge policymakers to think in terms of gradual strategies. Hard Target connects economic statecraft to the marketization process to understand North Korea and addresses a larger debate over the merits and demerits of "engagement" with adversaries.*

Nuclear Medicine Textbook

Methodology and Clinical Applications

Springer Building on the traditional concept of nuclear medicine, this textbook presents cutting-edge concepts of hybrid imaging and discusses the close interactions between nuclear medicine and other clinical specialties, in order to achieve the best possible outcomes for patients. Today the diagnostic applications of nuclear medicine are no longer stand-alone procedures, separate from other diagnostic imaging modalities. This is especially true for hybrid imaging guided interventional radiology or surgical procedures. Accordingly, today's nuclear medicine specialists are actually specialists in multimodality imaging (in addition to their expertise in the diagnostic and therapeutic uses of radionuclides). This new role requires a new core curriculum for training nuclear medicine specialists. This textbook is designed to meet these new educational needs, and to prepare nuclear physicians and technologists for careers in this exciting specialty.

Law and Corporate Behaviour

Integrating Theories of Regulation, Enforcement, Compliance and Ethics

Bloomsbury Publishing This book examines the theories and practice of how to control corporate behaviour through legal techniques. The principal theories examined are deterrence, economic rational acting, responsive regulation, and the findings of behavioural psychology. Leading examples of the various approaches are given in order to illustrate the models: private enforcement of law through litigation in the USA, public enforcement of competition law by the European Commission, and the recent reform of policies on public enforcement of regulatory law in the United Kingdom. Noting that behavioural psychology has as yet had only limited application in legal and regulatory theory, the book then analyses various European regulatory structures where behavioural techniques can be seen or could be applied. Sectors examined include financial services, civil aviation, pharmaceuticals, and workplace health & safety. Key findings are that 'enforcement' has to focus on identifying the causes of non-compliance, so as to be able to support improved performance, rather than be based on fear motivating complete compliance. Systems in which reporting is essential for safety only function with a no-blame culture. The book concludes by proposing an holistic model for maximising compliance within large organisations, combining public regulatory and criminal controls with internal corporate systems and external influences by stakeholders, held together by a unified core of ethical principles. Hence, the book proposes a new theory of ethical regulation.

Regulating and Managing Food Safety in the EU

A Legal-Economic Perspective

[Springer](#) This book analyses EU food law from a regulatory, economic and managerial perspective. It presents an economic assessment of strategies of food safety regulation, and discusses the different regulatory regimes in EU food law. It examines the challenges of food safety in the internal market as well as the regulatory tools that are available. The book's generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets, such as health claims, enforcement strategies, and induced risk management at the level of the organizations producing food. The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex-ante versus ex-post regulation and content-related versus information-related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena, and that economic effects consolidate or induce modification of the present legal structures and principles. The assessments, analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains.
