Pulmonary Rehabilitation

ERS Monograph 93

European Respiratory Society Pulmonary rehabilitation is an effective treatment for people with a range of chronic lung diseases. In recent years, there have been substantial advances in the science underpinning pulmonary rehabilitation. Advances have been seen in the patient groups in whom it is indicated; in the breadth of programme content; in new methods of delivery; and not least, in important outcomes. This Monograph brings together scientific and clinical expertise in pulmonary rehabilitation, with the aim of optimising its delivery in clinical practice.

Pulmonary Rehabilitation

CRC Press Pulmonary rehabilitation programmes are now a fundamental part of the clinical management of patients with chronic respiratory diseases. This comprehensive reference book places pulmonary rehabilitation within the wider framework of respiratory disease, and the health burden that this now poses worldwide. Part one of the book examines the evidence

Cardiovascular and Pulmonary

Physical Therapy E-Book

Evidence to Practice

Elsevier Health Sciences Get a solid foundation in cardiovascular and pulmonary physiology and rehabilitation! Cardiovascular and Pulmonary Physical Therapy: Evidence and Practice, 6th Edition provides a balanced and holistic approach to the full spectrum of cardiopulmonary physical therapy. From assessment to interventions, this book guides you through the management of patients with acute and chronic conditions, those in intensive care units, and of special populations such as children and the elderly. Case studies demonstrate evidence-based practice, and scientific research enhances your clinical decision making. Now including an enhanced eBook version, this text details the latest best practices to help you achieve the best physical therapy outcomes. Coverage of evidence-based practice includes the latest research from leading top-tier journals to support physical therapist clinical reasoning and decision making. Realistic scenarios and case examples show the application of concepts to evidence-based practice. Holistic approach supports treating the whole person rather than just the symptoms of a disease or disorder, covering medical, physiological, psychological, psychosocial, therapeutic, practical, and methodological aspects. Full-color photos and illustrations enhance your understanding of the book's concepts, ideas, and management considerations. Emphasis on the terminology and guidelines of the APTA's Guide to Physical Therapist Practice keeps the book consistent with the practice standards in physical therapy, including the International Classification of Functioning, Disability and Health. Primary and secondary cardiovascular and pulmonary conditions are emphasized, along with their co-existence. Multimorbidity focus is used rather than a single-disease framework, with attention to implications for assessment, management, and evaluation. Integrated approach to oxygen transport demonstrates how the cardiovascular and pulmonary systems function interdependently to support all organ systems. Key terms and review questions in each chapter focus your learning on important concepts and translating these into practice. NEW! Updated content reflects the latest research and clinical practice in the field. NEW! Enhanced eBook version is included with print purchase, which allows you to access all of the text, figures, and references from the book on a variety of devices. NEW! Video clips, interviews with authors and other experts in their fields, and more are included. NEW! Expanded contributions from experts from multiple countries maximize the validity of content.

Efficacy of a Pulmonary Rehabilitation Program on Knowledge and Self-efficacy for Elderly Chronic Obstructive Pulmonary Disease Patients

Textbook of Pulmonary Rehabilitation

Springer This book provides up-to-date knowledge on all aspects of the multidisciplinary approach to pulmonary rehabilitation that is essential in order to achieve optimal results. It will be an ideal resource especially for pulmonologists in training, but will also be of value for physiotherapists, other health care professionals, and technicians. Detailed information is presented on the diverse program components in pulmonary rehabilitation, with clear explanation of the roles of the nutritionist, psychologist, occupational therapist, respiratory nurse, and physical activity coach. Guidance is provided on identification of candidates for pulmonary rehabilitation and on all aspects of assessment, including exercise capacity, muscle function, and physical activity. Patient-centered, economic, and other outcomes are examined, with separate discussion of combined outcome assessment. Furthermore, due consideration is given to organizational aspects of pulmonary rehabilitation and to rehabilitation in specific scenarios, e.g., thoracic

oncology and surgery, transplantation, and the ICU. The authors are internationally recognized experts selected for their expertise in the topics they discuss.

Guidelines for Pulmonary Rehabilitation Programs

Human Kinetics Presents the best clinical practice for pulmonary rehabilitation based on current scientific evidence and expert opinion.

Lung Cancer

European Respiratory Society Lung cancer is the most common cause of death from cancer worldwide - it is estimated to cause nearly one in five cancer deaths. Most lung cancer patients are diagnosed late and for many of them, there are currently no curative therapy options available, meaning long-term survival is still low.

Nevertheless, enormous progress has been made in the field during the last decade. This Monograph provides a comprehensive overview of the current knowledge of and advances in lung cancer, covering areas such as: screening; tobacco control; COPD; diagnosis; therapy; and treatment of early stage lung cancer from both a surgeon's and radiation oncologist's perspective. Very recent achievements in innovative fields, such as targeted therapies and immunotherapies, are also discussed.

Guidelines for Pulmonary Rehabilitation Programs

Human Kinetics As the field of pulmonary rehabilitation has continued to advance and evolve, standards for patient care and for programs have become increasingly important. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers the best practices for patient care and serves as the must-have resource for programs to prepare for the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) pulmonary rehabilitation program certification. Readers will learn to tailor individualized care for respiratory patients as well as to improve new programs or update existing programs. For this revised fifth edition, AACVPR has assembled an expert team of nationally and internationally recognized

authors. Together, they present the individualized and interrelated components of pulmonary rehabilitation, including initial and ongoing assessment, collaborative self-management education, exercise training, psychosocial support, and outcome measurement. Highlighted guidelines have been included throughout the book, giving readers easy-to-find guidance for implementing treatment programs and helping patients stay on track. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers an evidence-based review in several areas based on the rapid expansion of high-quality scientific evidence since the last edition. To learn best practices for care and program development, readers will find contributions from expert pulmonary rehabilitation professionals in nursing, medicine, physical therapy, respiratory therapy, and exercise physiology. This text provides a scientific, practical framework to help aspiring and current practitioners do the following: Understand the current requirements for accrediting pulmonary-based facilities Design, implement, or update accredited pulmonary rehabilitation programs Deliver optimal care to patients with symptomatic respiratory needs Address program issues in exercise, outcomes, and management of pulmonary-based programs New to this edition, a web resource provides easy access to practical checklists from the book and offers biannual updates to keep programs current with key changes in the field. The reorganized content provides a more logical flow of information consistent with pulmonary rehabilitation development. A new chapter on nutrition helps readers to understand its importance in the rehab process and to provide rehab patients with the best opportunity for success. In the updated appendixes, readers will find a comprehensive set of forms, questionnaires, and assessment tools. With continued advancements in the science, application, and credentialing of pulmonary rehabilitation programs, the fifth edition of Guidelines for Pulmonary Rehabilitation Programs will assist respiratory practitioners in remaining up to date on the best practices in the field. This edition supports practitioners in understanding the components of pulmonary rehabilitation and applying best practices as well as updating and improving their programs to meet AACVPR certification requirements.

Rehabilitation Medicine Core Competencies Curriculum

Demos Medical Publishing " Built around the six core competencies for physicians practicing rehabilitation medicine as required by the ACGME, Physical Medicine and Rehabilitation Patient-Centered Care: Mastering the Competencies is a unique, self-directed text for residents. Covering all aspects of patient-centered care in the practice of physical medicine and rehabilitation, the book provides a competency-based approach to topics and conditions commonly encountered in this specialty. Thoughtfully organized chapters offer easy-to-access clinical content for all major practice areas, and the book's competency-based goals and objectives also serve as a clear platform for educating physiatrists in training during their clinical rotations. The first part of the book presents the foundations of the core competencies (medical knowledge, professionalism, patient care, practice-based learning and

improvement, system-based practice, and interpersonal and communication skills) with basic principles for application, and also includes chapters on implementing educational milestones, core professional education principles, and building leadership skills. In the second part, experts in the field apply these core competencies to the management of common conditions including stroke, spinal cord and brain injury, amputation and prosthetics, musculoskeletal disorders, multiple sclerosis, and much more. Each of these chapters identifies goals and objectives for each competency and concludes with a representative case study and self-assessment questions with answers and explanations. The book also provides references to key articles and links to internet-based educational materials. Practical tips, how-to and where-to guides, key points, tables, and charts also help to maintain current knowledge and competency in the many areas that comprise the field of PM&R. The book will be a valuable asset to psychiatrists in training, program directors, and teaching faculty in rehabilitation medicine training programs, and for continuing professional development. Key Features: ? Addresses core competencies for rehabilitation medicine physicians as required by the ACGME ? Covers all major psychiatric practice areas with facts, concepts, goals, and objectives following the competency model ? Grounded in a holistic, patient-centered approach ? Presents sample case studies with discussion points and self-assessment questions with answer key and explanations for each area to track progress and build clinical acumen "

Respiratory Regulation - Clinical Advances

Springer Science & Business Media This book, written for pulmonary and family doctors, general practitioners, allergologists, and neuropsychologists, presents cutting-edge clinical research and therapy-oriented knowledge in the field of respiratory medicine. Clinical knowledge is undergoing dramatic improvement. Respiration is one such prominent field. A better understanding of the pathogenesis of respiratory ailments and the regulation of lung ventilation is essential for advances in pharmacotherapy and the patient's quality of life. The book discusses a wide scope of topics, notably, innovations in detection and management of chronic inflammatory conditions such as COPD or asthma, acute infections of the respiratory tract, airway allergies and hyper-responsiveness, lung cancer, interstitial lung diseases, pulmonary function in health, disease and aging, sleep disordered breathing, interaction between the respiratory system and other bodily functions, and psychosomatic aspects of disease. After all, respiration is generated and integrated by the brain; therefore brain function is influential in respiratory regulation. The book is a platform that fosters the exchange of new clinical data between clinicians and academic neuroscientists, bringing a unique blend of medical diagnosis and practice to the leadership in respiratory medicine.

Cardiorespiratory Fitness

BoD - Books on Demand Cardiorespiratory fitness reflects the ability of the cardiovascular and respiratory systems to transport oxygen to the working muscles of the human body during exercise. It is influenced by factors such as age, genetic structure, body composition, and gender. This book provides the reader with interesting and current data about cardiorespiratory fitness. Chapters cover such topics as pulmonary rehabilitation in chronic obstructive pulmonary disease, ischemic preconditioning, metabolic syndrome in adults, cardiorespiratory fitness and intellectual disability, influence of lifestyle on body composition, and effect of

exercise on cognitive performance in the elderly.

Enhancing Patient Engagement in Pulmonary Healthcare

The Art and Science

Springer Nature This book examines the most up-to-date strategies that can be used to enhance the healthcare professional-patient interaction to influence positive behavior change and improve treatment adherence in pulmonary healthcare. This book is written by experts in the field who couple their experience with practical strategies (the art) with evidence-based theory (the science). Chapters discuss global concepts such as motivational interviewing on improving engagement and how to apply strategies to specific situations (for examples: smoking cessation, promoting physical activity, inhaler adherence, supplemental oxygen use, and non-invasive ventilation) commonly experienced on the front lines of caring for patients with pulmonary disorders. The textbook raises awareness of direct approaches and recent technological advances that healthcare professionals can use to support positive behavior change in their day-to-day clinical practice. Effective, patient-tailored self-management interventions are discussed, including the evidence for these interventions and ways to personalize the strategies to each patient's unique needs. This book is an ideal guide for healthcare professionals working with patients experiencing chronic pulmonary conditions, including pulmonologists, primary care physicians, physician assistants, nurses, trainees, and the many allied health professionals involved in delivering care such as respiratory therapists, pharmacists, and behavioral psychologists. The concepts of this book can also be applied to the management of other chronic diseases such as coronary artery disease and diabetes mellitus.

Pulmonary Function Measurement in Noninvasive Ventilatory Support

Springer Nature This book comprehensively addresses the use of pulmonary function measurement for the evaluation, screening and timing of noninvasive mechanical ventilation (NIMV) from hospital to home care. To do so, it describes three clinical stages of NIMV support: before NIV, to detect early markers and determine whether NIV is appropriate; during NIV, to evaluate NIV response; and in long-term NIV support. Additionally, it assesses a range of complementary health care organizations (pulmonary function labs, pneumology wards, semi-intensive care units and home mechanical ventilation programs), techniques (chest physiotherapy/airway secretions, etc.) and applications. In closing, the book offers practical recommendations on how noninvasive ventilation and lung function measurement can improve outcomes and quality of life, making it a valuable resource for all specialists, e.g. intensivists and pneumologists, as well as anesthesiologists and therapists. .

Bronchiectasis

European Respiratory Society Bronchiectasis is a hot topic in respiratory medicine, attracting an increasing amount of interest from clinicians, scientists, physiotherapists and the pharmaceutical industry. However, there is a lack of knowledge about the disease in terms of the research performed, clinical management, classification and patient treatment. The disease is also very complex because it can be caused by multiple underlying disorders, meaning its clinical presentation is highly diverse. This Monograph will tackle these issues by providing a series of chapters from recognised world experts covering: clinical management, service delivery, pathophysiology, microbiology and underlying disorders. The book also addresses the challenges faced in clinical trials and the need for drug development, and presents a number of clinical cases designed to aid learning. The Bronchiectasis Monograph substantially integrates the 2017 ERS guidelines on management of these patients. It is an essential reference for anyone caring for bronchiectasis patients or engaged in bronchiectasis research.

Pieces of the Pulmonary Rehabilitation Puzzle

Referral, Acceptance and Uptake to Pulmonary Rehabilitation for Chronic Obstructive Pulmonary Disease

"Chronic obstructive pulmonary disease (COPD) is a life-limiting, progressive lung disease characterized by airflow limitation. In 2016, chronic respiratory diseases were the third highest cause of non-communicable disease mortality, with COPD leading to the most respiratory disease deaths. Individuals with COPD experience symptoms such as a chronic chesty cough, wheezing, breathlessness, phlegm, reduced exercise capacity, limb muscle dysfunction and psychological side-effects such as anxiety or depression. All of these symptoms lead to an impaired quality of life. Pulmonary rehabilitation (PR) is regarded as the cornerstone of non-pharmacological treatment for COPD, and is a comprehensive program centred on exercise intervention, but also consists of education and social and psychological support. However, there are many barriers in the PR pathway that can negatively affect access, referrals, acceptance, uptake, completion and adherence to PR. Within the context of this complicated PR situation, the objectives of this thesis were to: 1) answer specific research questions relating to referral, acceptance and uptake to PR in order to improve understanding of the respective barriers for healthcare professionals (HCPs) and patients with stable and unstable COPD; 2) provide recommendations for improving rates of referral to PR and; 3) provide recommendations for the future development of interventions to improve acceptance and uptake to PR post acute-exacerbation of COPD (AECOPD). This thesis consists of two studies presented as separate manuscripts. The first manuscript consists of a systematic scoping review identifying the rate of referral of patients with COPD to PR by HCPs, and the barriers and enablers to referral perceived by HCPs. Referral rates were found to range from 0%-85%, and the most common barriers to PR referral were low knowledge of what PR is, its benefits and the referral process. The second manuscript is a study assessing the acceptability, feasibility, and safety of delivering a PR taster session to patients hospitalized with an AECOPD. It also evaluates the changes in patient knowledge of, and readiness to commence PR. The PR taster session was not prospectively acceptable to a large portion of patients, and only feasible with modifications to the original protocol. However, of those patients who accepted to partake in the intervention, positive median change was recorded in knowledge of PR as measured by the modified Understanding COPD (UCOPD) questionnaire, and an improvement was seen readiness to commence PR as measured by the Readiness to Change Exercise Questionnaire. The findings of both manuscripts highlight that despite the evidence for PR, barriers still exist at the patient and HCP levels. However, as both manuscript focus on a particular subset of individuals involved in the PR pathway (potential referring HCPs and patients with

AECOPD), both manuscripts are able to make specific recommendations for future interventions to improve HCP referral to PR, and acceptance and uptake of PR post-AECOPD, respectively." --
