The Maldives

Already selling consistently to all levels of the dive travel market, the dazzling Globetrotter Dive Guide: The Maldives now appears in a fully revised new edition for 2004. There are estimated to be over 3,000 dive sites in the Maldives, which remains one of the world's major diving destinations, renowned as much for the extraordinary natural beauty of its atoll formations as the quality of its diving. Despite the ravages of the 1998 El Nino phenomenon, the Maldives reefs have continued to thrive; where before-hand the focus was on stony corals, now divers of all nationalities come for the myriad fish life and breathtaking array of pelagic species, including awesome Manta Rays. For this new edition all coverage of the existing dive sites has been thoroughly updated, and the latest practical information is included in the regional directories.

Socio-scientific Issues in the Classroom

Teaching, Learning and Research

Springer Science & Business Media *Socio-scientific issues (SSI) are open-ended, multifaceted social issues with conceptual links to science. They are challenging to negotiate and resolve, and they create ideal contexts for bridging school science and the lived experience of students. This book presents the latest findings from the innovative practice and systematic investigation of science education in the context of socio-scientific issues. Socio-scientific Issues in the Classroom: Teaching, Learning and Research focuses on how SSI can be productively incorporated into science classrooms and what SSI-based education can accomplish regarding student learning, practices and interest. It covers numerous topics that address key themes for contemporary science education including scientific literacy, goals for science teaching and learning, situated learning as a theoretical perspective for science education, and science for citizenship. It presents a wide range of classroom-based research projects that offer new insights for SSI-based education. Authored by leading researchers from eight countries across four continents, this book is an important compendium of syntheses and insights for veteran researchers, teachers and curriculum designers eager to advance the SSI agenda.*

Women Underwater

The Comprehensive Guide for Women in Scuba Diving

Women Underwater - The Comprehensive Guide to Women in Scuba Diving, aims to reach out to women with specific information about their place in diving. With detailed guidance on equipment, medical issues and social factors, this book reaches women with inspiring stories from mentors who have forged a career in unique underwater fields. Authors Jill Heinerth and Renee Power tackle topics for both recreational and technical divers while featuring their vast experience in instruction, consulting and working in field predominantly governed by men. At times humorous yet also deadly serious, the book answers delicate questions about hygiene, equipment fit and dealing with sexism. Printed in full color and generously illustrated, Women Underwater will be published alongside a website and blog that keeps readers up to date on opportunities, new equipment and activities for women divers.

The Darkness Beckons

The History and Development of World Cave Diving

Vertebrate Publishing *Martyn Farr's The Darkness Beckons charts the history and development of cave diving, from early underwater expeditions in France in the late nineteenth century, through to cutting-edge dives across the globe, where iron-willed individuals are pushing the limits of equipment and techniques in the pursuit of exploration. Cave diving is the natural evolution of caving, where cavers and open-water divers overcome the challenges of water-filled passages by using specialist breathing apparatus to explore further and deeper than ever before. The challenges are many – distance, depth, temperature, visibility, rockfall and simple restriction in passage size – together with the physical and mental demands placed*

on an individual in an environment where, despite meticulous preparation, equipment can malfunction and one cannot expect to be rescued if something goes wrong. Early cave dives were made using Standard Equipment diving suits, before 'frogman' equipment was adopted by British and Italian divers in the 1940s. Around the same time, Jacques-Yves Cousteau and Émile Gagnan designed the compressed-air aqualung, the first scuba equipment. The development of breathing apparatus has continued, alongside solutions to evermore challenging projects, especially those at extreme depth. British cave divers, including the author, have been at the forefront of many developments, such as the explorations at Wookey Hole in the Mendips, Keld Head in the Yorkshire Dales and Pozo Azul in Spain. Cave diving today is a truly international endeavour, and Farr gives detailed and engaging accounts of developments in Europe, the Americas, Australia and New Zealand, Southern Africa and more. Farr introduces cave diving's pioneers and chronicles their achievements. Among a cast of many are the Britons Graham Balcombe and Mike Boon; the American Sheck Exley, who died while attempting to establish a new depth record in the Zacatón sinkhole in Mexico; and the outstanding German cave diver and equipment innovator Jochen Hasenmayer. The stories of their adventures are charged with courage, danger and excitement, and some have led to tragedy. First published in 1980, this 2017 edition of *The Darkness Beckons* has been fully revised and updated to reflect the latest developments. Featuring over 400 breathtaking photographs and illustrations, and with a foreword by renowned American cave diver and explorer Bill Stone, it is an inspirational read for anyone with an interest in exploration and adventure.

The Last Dive

A Father and Son's Fatal Descent into the Ocean's Depths

Harper Collins *“Superbly written and action-packed, The Last Dive ranks with such adventure classics as The Perfect Storm and Into Thin Air.”—Tampa Tribune Spurred on by a fatal combination of obsession and ambition, Chris and Chrisy Rouse, an experienced father-son scuba diving team, hoped to achieve wide-spread recognition for their outstanding and controversial diving skills by solving the secrets of a mysterious, undocumented, World War II German U-boat that lay only a half day’s mission from New York Harbor. The Rouses found the ultimate cost of chasing their personal challenge: death from what divers dread the most—decompression sickness, or “the bends.” In this gripping recounting of their tragedy, author Bernie Chowdhury, himself an expert diver, explores the thrill-seeking, high-risk world of deep sea diving, its legendary figures, most celebrated triumphs, and notorious tragedies.*
