Unmanageable Care

An Ethnography of Health Care Privatization in Puerto Rico

NYU Press *In Unmanageable Care, anthropologist Jessica M. Mulligan goes to work at an HMO and records what it's really like to manage care. Set at a health insurance company dubbed Acme, this book chronicles how the privatization of the health care system in Puerto Rico transformed the experience of accessing and providing care on the island. Through interviews and participant observation, the book explores the everyday contexts in which market reforms were enacted. It follows privatization into the compliance department of a managed care organization, through the visits of federal auditors to a health plan, and into the homes of health plan members who recount their experiences navigating the new managed care system. In the 1990s and early 2000s, policymakers in Puerto Rico sold off most of the island's public health facilities and enrolled the poor, elderly and disabled into for-profit managed care plans. These reforms were supposed to promote efficiency, cost-effectiveness, and high quality care. Despite the optimistic promises of market-based reforms, the system became more expensive, not more efficient; patients rarely behaved as the expected health-maximizing information processing consumers; and care became more chaotic and difficult to access. Citizens continued to look to the state to provide health services for the poor, disabled, and elderly. This book argues that pro-market reforms failed to deliver on many of their promises. The health care system in Puerto Rico was dramatically transformed, just not according to plan.*

Emotional Labour in Health Care

The unmanaged heart of nursing

Routledge *Do nurses still care? In today's inflexible, fast-paced and more accountable workplace where biomedical and clinical models dominate health care practice, is there room for emotional labour? Based on original empirical research, this book delves into personal accounts of nurses' emotion expressions and experiences as they emerge from everyday nursing practice, and illustrates how their emotional labour is adapting in response to a constantly changing work environment. The book begins by re-examining Arlie Hochschild's sociological notion of emotional labour, and combines it with Margaret Archer's understanding of emotion and the inner dialogue. In an exploration of the nature of emotional labour, its historical and political context, and providing original, but easily recognisable, typology, Catherine Theodosius emphasises that it is emotion - complex, messy and opaque - that drives emotional labour within health care. She suggests that rather than being marginalised, emotional labour in nursing is frequently found in places that are hidden or unrecognised. By understanding emotion itself, which is fundamentally interactive and communicative, she argues that emotional labour is intrinsically linked to personal and social identity. The suggestion is made that the nursing profession has a responsibility to include emotional labour within personal and professional development strategies to ensure the care needs of the vulnerable are met. This innovative volume will be of interest to nursing, health care and sociology students, researchers and professionals.*

It provides an original, but easily recognisable typology, and emphasizes that it is a complex emotion that drives emotional labour within the healthcare setting.*

Manageable Problems/Unmanageable Death

The Social Organization of Palliative Care

This thesis is an exploration of the social construction and organization of community palliative care. The author's personal experience as the wife of a dying person is used to explicate the social relations of palliative care, through the feminist and constructivist methodology of institutional ethnography. The data analyzed includes a personal journal, working texts of the palliative care team (e.g. recording and reporting forms) obtained through Freedom of Information, and the Palliative Care at Home manual. The author argues that the work of palliative care is text mediated, and carries into the helping relationship ideas from the discourse, for instance about the necessity for a multidisciplinary professional team. These work practices construct the dying person as a set of manageable problems, in a way that objectifies the patient and family members.

The Routledge Handbook of Medical Anthropology

Routledge *The Routledge Handbook of Medical Anthropology provides a contemporary overview of the key themes in medical anthropology. In this exciting departure from conventional handbooks, compendia and encyclopedias, the three editors have written the core chapters of the volume, and in so doing, invite the reader to reflect on the ethnographic richness and theoretical contributions of research on the clinic and the field, bioscience and medical research, infectious and non-communicable diseases, biomedicine, complementary and alternative modalities, structural violence and vulnerability, gender and ageing, reproduction and sexuality. As a way of illustrating the themes, a rich variety of case studies are included, presented by over 60 authors from around the world, reflecting the diverse cultural contexts in which people experience health, illness, and healing. Each chapter and its case studies are introduced by a photograph, reflecting medical and visual anthropological responses to inequality and vulnerability. An indispensable reference in this fastest growing area of anthropological study, The Routledge Handbook of Medical Anthropology is a unique and innovative contribution to the field.*

Leviathan on the Right

How Big-Government Conservatism Brought Down the Republican Revolution

Cato Institute *For conservatives generally and the Republican Party in particular, 2006 was a time of intense soul-searching. For the first time in a dozen years, Republicans lost control of Congress. As a result, they are being forced to reexamine who they are and what they stand for. It's about time. After all, more than a decade has passed since President Bill Clinton announced in his State of the Union address that "the era of big government is over." Yet, since then, government has grown far bigger and far more intrusive. It spends more, regulates us more, and reaches far more into our daily lives than it did before the Republican Revolution. Behind this alarming trend stands the rise of a new brand of conservatism—one that believes big government can be used for conservative ends. It is a conservatism that ridicules F. A. Hayek and Barry Goldwater while embracing Teddy and even Franklin Roosevelt. It has more in common with Ted Kennedy than with Ronald Reagan. Leviathan on the Right provides an incisive analysis of the roots and core beliefs of big-government conservatism and the major currents that fueled its growth—neoconservatism, the Religious Right, supply-side economics, national greatness conservatism, and Newt Gingrich-style technophilia—and offers a detailed critique of its policies on a wide range of issues. The book contains a clear warning that, unless conservatives return to their small-government roots, the electoral defeat of 2006 is just the beginning.*

Biomedicine, Healing and Modernity in Rural Bangladesh

Springer Nature *This book provides an ethnographic account of the ways in which biomedicine, as a part of the modernization of healthcare, has been localized and established as the culturally dominant medical system in rural Bangladesh. Dr Faruk Shah offers an anthropological critique of biomedicine in rural Bangladesh that explains how the existing social inequalities and disparities in healthcare are intensified by the practices undertaken in biomedical health centres through the healthcare bureaucracy and local gendered politics. This work of villagers' healthcare practices leads to a fascinating analysis of the local healthcare bureaucracy, corruption, structural violence, commodification of health, pharmaceutical promotional strategies and gender discrimination in population control. Shah argues that biomedicine has already achieved cultural authority and acceptability at almost all levels of the health sector in Bangladesh. However, in this system healthcare bureaucracy is shaped by social capital, power relations and kin networks, and corruption is a central element of daily care practices.*

Unequal Coverage

The Experience of Health Care Reform in the United States

NYU Press *The Affordable Care Act's impact on coverage, access to care, and systematic exclusion in our health care system The Affordable Care Act set off an unprecedented wave of health insurance enrollment as the most sweeping overhaul of the U.S. health insurance system since 1965. In the years since its enactment, some 20 million uninsured Americans gained access to coverage. And yet, the law remained unpopular and politically vulnerable. While the ACA extended social protections to some groups, its implementation was troubled and the act itself created new forms of exclusion. Access to affordable coverage options were highly segmented by state of residence, income, and citizenship status. Unequal Coverage documents the everyday experiences of individuals and families across the U.S. as they attempted to access coverage and care in the five years following the passage of the ACA. It argues that while the Affordable Care Act succeeded in expanding access to care, it did so unevenly, ultimately also generating inequality and stratification. The volume investigates the outcomes of the ACA in communities throughout the country and provides up-close, intimate portraits of individuals and groups trying to access and provide health care for both the newly insured and those who remain uncovered. The contributors use the ACA as a lens to examine more broadly how social welfare policies in a multiracial and multiethnic democracy purport to be inclusive while simultaneously embracing certain kinds of exclusions. Unequal Coverage concludes with an examination of the Affordable Care Act's uncertain legacy under the new Presidential administration and considers what the future may hold for the American health care system. The book illustrates lessons learned and reveals how the law became a flashpoint for battles over inequality, fairness, and the role of government. More books on the health care debate*

Health Care in Transition

Nova Publishers Health care is clearly in transition -- but to where? Managed or unmanaged care? HMO's or not? Are insurance companies and hospitals the enemy of health care for their own patients? What about the 40,000,000 uninsured in America? Don't ask the patients, for they have become the ping-pong balls in the health care game. This book examines important issues in this ever-growing maze.

Medium Secure Psychiatric Provision in the Private Sector

Routledge First published in 1998, this volume assesses issues of privatisation and mental health provision in the Medium Secure Psychiatric Care sector, including case studies on two regional secure units and Stockton Hall Psychiatric Hospital between 1989 and 1992. It emerged at the end of a period of Conservative Party dominance of almost two decades in which privatisation had been at the forefront of discussion and focused on the midpoint of that era. Despite this, privatisation of psychiatric care had received little discussion. Here, Katrina R. Moss discusses the role of private medical care in the UK healthcare landscape with focus on the meaning of privatisation, attitudes towards privatising the criminal justice system along with relevant legal and medical issues related to regulation by the Mental Health Act 1983.

Essays in Interactionist Sociology

Archway Publishing *Essays in Interactionist Sociology* contains a selection of contributions, spanning five decades, that advance the theory, organization, and research of the interactionist tradition. Harvey A. Farberman, professor emeritus of social welfare policy at Stony Brook University, wrote the fourteen essays, twelve of which were published in academic journals or annuals and two that are original to this volume. Each one focuses on some aspect of the theory of symbolic interactionist sociology, the professional and organizational development of the interactionist perspective, or empirical studies inspired by the perspective. The author highlights the emergence of the perspective from the philosophy of American Pragmatism, paying particular attention to the contributions of Charles Sanders Peirce and William James. He also examines what may be called refractions of the perspective. The latter part of the book contains four studies. Personalization in Lower Class Consumer Interactions; A Criminogenic Market Structure: The Automobile Industry; Fantasy in Everyday Life: The Intersection of Social Psychology and Political Economy; and Family Caregiving to Elders in New York State. In many ways, the essays in this volume contribute to and reflect the development of interactionist sociology as it grew from an American innovation to a robust, international social science discipline.

Heart Failure, An Issue of Critical Nursing Clinics, E-Book

Elsevier Health Sciences Heart failure is the only cardiovascular disease that is increasing. The impact on the critical care environment and the health care system, as a whole, is significant from both a cost and burden to the system perspective. There are 6.5 million hospital days a year and nearly \$40 billion dollars in yearly health care costs attributed to heart failure in the United States. There are more Medicare monies spent for diagnosing and treating heart failure than any other Diagnosis Related Group. There is a 24% hospital re-admission rate for this diagnosis which leads to financial implications for health care systems. The human cost is also significant. Less than half of Americans diagnosed with heart failure survive greater than 5 years. The ongoing health care needs and cost of this chronic disease takes a significant toll on patients' finances, time and quality of life. Over \$2.9 billion dollars is spent annually on the pharmaceutical management of heart failure in the United States. This diagnosis is the leading cause of hospitalization for patients who are 65 years of age and older. Few health care providers in the critical care environment are not affected by heart failure on a routine basis. Caring for these patients and their families is both a challenging and yet a rewarding experience. This edition will provide critical care nurses with a comprehensive heart failure review which is essential in caring for this challenging population given the dynamic health and critical care environments.

Best Care at Lower Cost

The Path to Continuously Learning Health Care in America

National Academies Press America's health care system has become too complex and costly to continue business as usual. *Best Care at Lower Cost* explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009--roughly \$750 billion--was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. *Best Care at Lower Cost* emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.

Charlie Creative Lab If your child, or someone important in your life, suffers from attention deficit hyperactivity disorder (ADHD), then you know how caring for them can be particularly draining. Their impulsive, fearless, and chaotic behaviors always seem to spring out of nowhere, and even simple everyday activities can become stressful and tiring. Although it is difficult at times, always remember that a child with ADHD cannot help but behave in that particular manner, and it's not his fault if your days are exhausting. People who suffer from ADHD find it incredibly difficult to do things that are considered "normal" by other individuals, like suppressing impulses and weighing situations and consequences before they engage in an action. Not all children with ADHD behave in the same way, and there are different patterns in which the disorder may appear... However, the consequences of leaving the situation as it is, and not helping out your kid with his disorder, can have significant effects on his future life and career. ADHD is severely linked to extreme cases of low self-esteem that can impair the way they go on and face life and daily experiences alike. Does your child try his hardest, both at home and at school, to pay attention or be still? If he realizes he can't meet "common" expectations, then he will feel at a loss towards his schoolmates.
